# FOREIGN AGRICULTURAL TRADE

OF THE UNITED STATES

# Digest

JANUARY 1959

Issued monthly by Foreign Agricultural Service, United States Department of Agriculture, Washington 25, D. C. Free within U. S. on request. Also available is the monthly Foreign Agricultural Trade Statistical Report, listing monthly and annual statistics on quantity and value of U. S. agricultural exports and imports, destinations, comparisons with previous year.

## EXPORT HIGHLIGHTS

July-November agricultural exports this year 6 percent under last year.

U. S. exports of farm products during the first 5 months of fiscal year 1959 (the year ending next June 30) are estimated at \$1,600 million, 6 percent under 1958's \$1,702 million. November 1958 exports are estimated at \$340 million compared with \$369 million in November 1957 and \$358 million in October 1958.

### U. S. Agricultural Exports July-November 1957 and 1958

Commodity	1957	1958	1/	Chg.
	\$ Million			%
Cotton	321	190		-41
Grains & feeds 2/	515	590		+15
Wheat & flour 2/	284	280		- 1
Feed grains 2/ 3/	151	215		+42
Rice, milled 2/	40	50		+25
Tobacco, unmf.	197	205		+ 4
Veg. oils & seeds 2/	182	170		- 7
Soybeans	104	95		- 9
Ed.veg.oils 2/ 4/	38	50		+32
Fruits & preps.	113	110		- 3
Vegetables & preps. 2/	49	55		+12
Animals & products 2/	214	195		- 9

Hides & skins	29	20		-31
Dairy products 2/	53	40		-25
Private relief 5/	61	50		-10
Other 2/	50	35		-30
<b>TOTAL</b>	<b>1,702</b>	<b>1,600</b>		<b>- 6</b>

1/ Partly estimated. 2/ Excludes private relief. 3/ Excludes products. 4/ Cottonseed and soybean. 5/ Mostly CCC donations.

Cotton predominates in fiscal year export decline. By far the largest reduction in exports has occurred in cotton: The July-November 1958 dollar drop from a year earlier was \$131 million, equivalent to an amount one-third greater than the net \$102 million decrease for all farm product exports. July-November cotton exports estimated at \$190 million in 1958 were valued 41 percent under the \$321 million in 1957.

Dairy products also contributed to smaller exports. July-November exports of dairy products, exclusive of USDA donations, are estimated at \$40 million in 1958 compared with \$53 million in 1957. The 25 percent decline is attributed mainly to smaller shipments of evaporated milk, nonfat dry milk, dried whole milk, and cheese.

Smaller declines in other export items. Declines of less than \$10 million occurred in July-November

exports of wheat, soybeans, flaxseed, lard, tallow, and hides and skins. Although there was a smaller value for wheat, the volume exported was slightly larger.

Feed grains show impressive export gains. Feed grain exports--oats, barley, corn, and sorghum grains, excluding products--increased from \$151 million in July-November 1957 to an estimated \$215 million in July-November 1958. Most impressive gainers were barley and sorghum grains.

Edible vegetable oil exports also rise. Shipments of soybean and cottonseed oils in July-November rose from \$38 million in 1957 to an estimated \$50 million in 1958.

Smaller increases in other export items. Increases amounting to \$10 million or less occurred in exports of the commodities rye, rice, and tobacco, and of the meat and vegetable groups. The value gain for tobacco brought the 5-month total to more than \$200 million.

July-November exports at \$3.8 billion annual rate. Agricultural exports in the July-November period this fiscal year were at the annual rate of \$3.8 billion, which compares with the actual export total of \$4 billion in fiscal year 1958.

— 0 —

**COTTON** Monthly cotton shipments this season still far behind 1957 levels. November 1958 cotton exports are estimated at 300 thousand running bales, 226 thousand under the November 1957 figure. During the first 4 months of the season (August-November), an estimated 900 thousand bales were shipped this season contrasted with 1,724 thousand last season. Although some strengthening in consumer demand abroad may be expected in the second half of the season, U. S. exports may do well to reach 4 million bales this season.

Cutbacks in consumption and imports and some drawdown in stocks are expected in such major importing countries as Japan, the United Kingdom, West Germany, Italy, and others. A factor of some importance, particularly for Japan and India, is the increasing competition from Communist China in overseas textile trade.

World cotton trade is estimated at about 13 million bales (500 pounds gross weight), more than 1 million less than in 1957-58. The U. S. share may fall to around 30 percent from 42 percent in 1957-58.

**GRAINS** Wheat exports holding steady. November 1958 wheat exports, including grain equivalent of flour and excluding USDA private welfare donations, are estimated at 31 million bushels. Although 5 million bushels under October 1958 shipments, the November 1958 volume was 1 million above November 1957. The rise was accounted for by increased grain exports. For July-November, the exports were 161 million bushels in the 1958-59 season and 159 million in the 1957-58 season. A larger proportion of lower priced wheat this season resulted in a \$4 million smaller value.

## TRADE NEWS ROUNDUP

---

January 7, 1959

Ten Western European countries (the United Kingdom, France, West Germany, Netherlands, Belgium, Luxembourg, Italy, Denmark, Norway, and Sweden) made their currencies externally convertible effective December 29, 1958. As a result, each country allows foreign individuals, firms, or governments to freely convert currency earnings into any other currency. Freedom of conversion does not apply to residents of individual countries. External convertibility removes one of the bases for discrimination against imports from the dollar area and should facilitate an expansion of U. S. trade.

— 0 —

Six Western European countries (West Germany, France, Italy, Belgium, Netherlands, and Luxembourg)--comprising the European Economic Community--on January 1 took the first step toward gradual removal of all tariffs among themselves. January 1, 1957 rates were reduced by 10 percent, and bilateral quotas were converted into "global quotas" applied without discrimination to all member states. These adjustments are internal and relate to trade relations among the Six.

The beginning of gradual external tariff adjustments is not scheduled until January 1, 1962. Certain of the current internal tariff adjustments are to be extended provisionally to all countries now entitled to most-favored-nation treatment, including the United States. However, there were few, if any, tariff reductions on imports of agricultural products from the United States.

— 0 —

Argentina undertook a program in December to revive her economy and particularly her trade. The peso was devalued and will be permitted to fluctuate freely. This should encourage production for export. In addition, import restrictions and a complicated system of export controls were virtually abolished, except for import taxes on nonessential goods. The foreign exchange market will be bolstered initially by dollar loans totaling \$329 million from the International Monetary Fund, the U. S. Government, and a group of private U. S. banks. Exchange and payments stability should gradually result in reviving market opportunities for products imported from the United States.

— 0 —

France devalued the franc from 420 to 493.7 per U. S. dollar, effective December 27, 1958. The devaluation applies to all types of transactions and will make French exports lower priced and imports more expensive.

— 0 —

The United States-Canadian Committee on Trade and Economic Affairs met January 5 and 6 in Ottawa. There was a friendly exchange of views, and progress was made in furthering good trade relations between the 2 countries. Two decisions are of special interest to U. S. agriculture:

(1) Agreement to hold quarterly consultations on U. S. grain disposal programs. (2) Agreement to consult on recent Canadian restrictions on food imports.

---

Competition for world markets in food and feed in 1958-59 is being accentuated by the export policies of the Soviet Union and Mainland China. Unusually good harvests in these countries (particularly wheat, rice, and soybeans) accounted for a substantial part of the increase in world crop production this year. Both countries appear to be in a position to export more this year than last.

---

Three new Title I Public Law 480 agreements were announced late in December:

- \* Finland--\$4 million for cotton, tobacco, and fresh lemons.
  - \* United Arab Republic--\$24.9 million for wheat and wheat flour.
  - \* Yugoslavia--\$94.8 million for wheat, cotton, soybean or cottonseed oil, and dry edible beans.
- 

USDA has issued a Title I Public Law 480 purchase authorization to Turkey for approximately 6.9 million pounds of whole, frozen, ready-to-cook poultry (chickens and turkeys). Quality must be equivalent to U. S. Grade A.

Increased sales of U. S. frozen turkey are taking place in the Dutch market. Two developments have aided increased sales of meaty, ready-to-cook birds: (1) The use of colorful promotional materials supplied by the National Turkey Federation, Poultry and Egg National Board, and the Institute of American Poultry Industries and (2) the rapid increase in the number of freezer cabinets in the Netherlands. Ten years ago only a few retail facilities were equipped to handle frozen foods while today there are thousands.

The British Government has increased this fiscal year's dollar quota for imports of natural cheese from North America by \$1.4 million. Over \$3 million of the usual \$4.2 million quota was used in November to buy Canadian cheddar due to a shortage of New Zealand and Australian cheddar in the British market.

---

West Germany has announced dollar import tenders for specified fruits and fruit juices, canned asparagus, and onions. Onions must clear customs by May 31; others, any time in 1959.

---

The United States is gaining as West Germany's supplier of cattle hides. West German imports of U. S. hides in the first 6 months of 1958 were up 20 percent over the like period in 1957. During the same period, West Germany imported less from Argentina and Uruguay.

---

Rice exports ahead of last year. Milled rice exports amounted to 60 million pounds in November 1958, well under October 1958's 132 million pounds and November 1957's 94 million. August-November exports of 438 million pounds this season compare with 372 million last season. High level at the start of this season reflected barter deals with West Germany and the Philippines and some Title I transactions unshipped in the previous season.

Barley and sorghum grain shipments bolster feed grain exports. Feed grain exports reached an estimated 970 thousand short tons in November 1958, well above 858 thousand in the month before and 807 thousand in November 1957. July-November's 4.7 million tons in 1958 were 1.4 million more than comparable 1957 volume. The increase of more than 40 percent reflected near tripling of both barley and sorghum grain shipments. Continued interest in expanded livestock feeding has encouraged greater feed grain sales in Europe. In Asia, Japan's spring barley crop was hit by bad weather, and India's long dry spell on the heels of a below normal spring crop gave rise to demand for U. S. sorghum grains. Larger barley exports to South Korea reflected increased U. S. Government export programming.

TOBACCO Tobacco exports maintained this season. U. S. unmanufactured tobacco exports are holding up well this season: 52 million pounds in November 1958, 4 million more than in November 1957. July-November's 269 million pounds this season was the same as last season. Higher prices resulted in a value gain of \$7 million over the previous year. Two factors primarily have favored U. S. exports: (1) Smaller supplies available from Canada and the Federation of Rhodesia and Nyasaland. (2) Substantial gains in foreign consumption, particularly in Western Europe.

ANIMAL FATS AND OILS Tallow exports running ahead of a year ago. October-November 1958 exports of edible and inedible tallow amounted to 189 million pounds, 16 million above the October-November 1957 total. The full season's total is likely to run about 1 billion pounds, the same as in 1957-58 but much lower than the 1.3 billion pounds exported in 1956-57. Slower export for the season reflects increased competition from petroleum-based detergents in Europe and from New Zealand and Australian tallow in the Japanese market. Other factors include moderately higher prices arising from the smaller U. S. supply.

Lard exports to improve. Lard exports were 80 million pounds for October-November 1958, the same as a year ago. The outlook for the full season is for larger exports in 1958-59 than in 1957-58. A substantial gain in the domestic supply this season is indicated by the fall pig crop. Moreover, increased supplies of competitive fats and oils at home will tend to make U. S. lard more competitive pricewise in world markets. Western Europe's lard outturn is expected to be smaller this season than last.

FRUITS Orange exports in 1957-58 smallest in 16 years. The 1957-58 export season for fresh oranges, which ended in October 1958, was the lowest since 1941-42. Exports were 406 million pounds in 1957-58 compared with 755 million in 1956-57 and 384 million in 1941-42. Sharply reduced exports last season were the outcome of unfavorable weather--severe freeze in Florida during the winter and dry weather in California during the summer. Both quantity and quality suffered. The share of the crop exported in fresh form fell from 6.6 percent in 1956-57 to 4.4 percent in 1957-58. The decline in oranges was partly made up by larger shipments of lemons. Exports of oranges this season may show slight, if any, recovery although lemon shipments may show a slight upturn.

VEGETABLE OILS Unchanged U.S. vegetable oil exports at beginning of new season. Exports of soybean and cottonseed oils in the first 2 months (October-November) of the 1958-59 season are estimated at 115 million pounds, the same as a year earlier. While Title I exports are expected to reach a record high this season, dollar sales will be limited by strong competition from heavy exportable supplies abroad.

#### I M P O R T     H I G H L I G H T S

July-September agricultural imports smaller this year. Imports of farm products in the first quarter (July-September), latest officially recorded, were \$901 million in 1958-59, \$33 million less than imports in the same period of 1957-58. Supplementary products were ahead by \$64 million; complementary items ran behind by \$97 million.

Rise occurred in supplementary category. Supplementary farm product imports (items like those produced by U. S. agriculture) advanced from \$440 million in July-September 1957 to \$504 million in July-September 1958. Increases of \$10 million or more occurred in dutiable cattle, beef and veal, pork, and cane sugar. Larger livestock and livestock product imports have been stimulated by reduced slaughter and higher prices in the United States. Largest value reduction--\$15 million--was in cotton; but there was an increase in the number of bales.

Less complementary products imported. In contrast with the supplementary increase, imports of complementary products dropped from \$494 million in July-September 1957 to \$397 million in July-September 1958. Reductions of \$10 million or more took place in imports of carpet wool, coffee, and crude rubber, reflecting lower import prices as well as smaller volume. Quantity reductions were substantially less percentagewise. For cocoa beans, however, higher prices for a reduced volume of imports resulted in a slight value rise.

# FOREIGN AGRICULTURAL TRADE

OF THE UNITED STATES

# Digest

FEBRUARY 1959

Issued monthly by Foreign Agricultural Service, United States Department of Agriculture, Washington 25, D. C. Free within U. S. on request. Also available is the monthly Foreign Agricultural Trade Statistical Report, listing monthly and annual statistics on quantity and value of U. S. agricultural exports and imports, destinations, comparisons with previous year.

## EXPORT HIGHLIGHTS

### Fiscal Year

July-December agricultural exports this fiscal year were 6 percent less than last year. The July-December total is estimated at \$1,965 million in 1958-59 compared with \$2,090 million in 1957-58. Principal reduction was in cotton exports, followed by lesser declines in flaxseed, hides and skins, dairy

U. S. Agricultural Exports July-December 1957 and 1958

1/ Partly revised. 2/ Partly estimated. 3/ Excludes private relief. 4/ Excludes products. 5/ Cottonseed and soybean. 6/ Mostly CCC donations.

products, animal fats, soybeans, and fruits. Partly offsetting increases occurred mostly in feed grains, particularly barley and grain sorghums, but also in rye, edible vegetable oils, rice, wheat, meats, vegetables, and tobacco.

December 1958 farm product exports are estimated at \$355 million. Exports for December were 9 percent below December 1957's \$388 million and 4 percent greater than November 1958's \$342 million. The December 1958 reduction from a year earlier was the result of smaller shipments of cotton, vegetable oils, and oilseeds. December's increase over the previous month is attributed to larger exports of wheat and feed grains.

Exports, excluding cotton, increased 3 percent. July-December agricultural exports, excluding cotton, excluding cotton, increased from \$1,674 million in 1957-58 to \$1,730 million in 1958-59. They compare favorably with the corresponding

6-month figure of \$1,830 million in 1956-57, the year in which agricultural exports, including cotton, were the largest in history.

Cotton's share of export total was reduced sharply. July-December cotton exports shrank from \$416 million in fiscal year 1957-58 to \$235 million this year. The weakness in foreign demand, along with the increased supply of foreign growths, has been the major factor in the decline. Cotton's share of all farm product exports fell from 20 to 12 percent. The value was no greater than that of tobacco and substantially less than either that of wheat or feed grains.

Most grains shared in 18-percent export expansion. July-December exports of grains and feeds, excluding private relief, stepped up from \$625 million in 1957-58 to \$735 million in 1958-59. Wheat exports rose 3 percent in value, reflecting the larger volume of grain and higher prices for flour. Feed grain exports, up 42 percent chiefly because of increased livestock feed requirements in Europe, included more barley, corn, and grain sorghums, together with higher prices for oats. Milled rice exports increased 6 percent in value and 17 percent in volume.

Both quantity and value were ahead for tobacco exports. Compared with a year earlier, unmanufactured tobacco exports, which ran 7 percent behind in value in the July-September 1958 period, were 3 percent ahead for July-December. The half-year value of \$235 million in 1958-59 compares with that of \$228 million in the previous year. Export weight increased from 311 million to 314 million pounds. Improvement for the most part reflects smaller supplies of Canadian and Rhodesian leaf in world markets and the continuing growth in foreign cigarette consumption.

Vegetable oil and oilseed exports fell 8 percent. Exports slipped from \$234 million in the July-December period of 1957-58 to \$215 million in the like period this year. Although bigger soybean oil exports helped to offset a large part of the reduction in cottonseed oil, there was also a 39-percent drop in flaxseed and one of 9 percent in soybeans.

Apples and oranges predominated in fruit export decline. Exports of fruits and preparations are estimated at \$130 million in July-December of 1958-59, 2 percent less than in the like period of 1957-58. Foreign demand for fresh apples was reduced following recovery in European production. Less fresh oranges were available for export mainly because of the smaller U. S. output. Dried fruit and orange juice exports were down also, but higher prices bolstered values. Canned fruits gained most.

Increased exports of vegetables reflected improved foreign demand for peas. Exports of vegetables and preparations gained by 3 percent over a year earlier, reaching a total of \$60 million in July-December 1958-59. Principal increase was in dry edible peas, but higher prices for dry edible beans also helped. More peas were exported to Europe because of the short crop there this season. More white potatoes were exported also, but the effect of the gain on value was largely lost in lower prices. Less canned vegetables were exported.

# TRADE NEWS ROUNDUP

---

February 6, 1959

Prospects are brighter for U. S. exports of variety meats and lard to West Germany. Per capita meat consumption there in 1958 exceeded that in 1957, and hog production is expected to drop in 1959.

Although Canada reports that 94 percent more Canadian beef cattle was exported to the United States in 1958 than in 1957, the southward movement slackened after October 1958. Canadian inspections in December and January were about half of those a year earlier. With recent stronger Canadian prices, a northward movement of slaughter cattle from the United States has been underway.

---

The current season's outlook indicates increased U. S. citrus fruit exports to Europe: Oranges and tangerines, about 69 million boxes, 9 million more than last year; winter lemons, 7.8 million boxes, 1.7 million more; and grapefruit, 400 thousand boxes more.

---

Private industry's popular exhibit, "The Champ"--a giant lifelike plastic steer 12 feet tall, 19 feet long, and nearly 8 feet wide--is being sent abroad under a new market development project being carried out in cooperation with U. S. grain and soybean producers. "The Champ" will be part of a mobile exhibit which will tour Italy and elsewhere in Europe to demonstrate effective use of feed grains and feed concentrates in livestock production. This mobile exhibit will call attention to desirability of good feeding practices and export availability of U. S. feedstuffs.

---

USDA now offers a service for inspecting cargo wheat for protein content. This service is authorized by the Agricultural Marketing Act of 1946 and is performed for a fee upon request. It supplements grain inspection and grading under the U. S. Grain Standards Act.

The CCC Export Credit Sales Program for feed grains was resumed January 12 for specified countries which have not been buying grains for dollars. Limiting credit sales of CCC-owned feed grains to these specific countries is aimed at preventing interference with exports from commercial supplies.

---

Foreign restrictions on some U. S. farm exports have been eased:

- \* France has liberalized dollar imports of cotton; cotton linters; hides and skins; forage seeds; seed beans, peas and potatoes; and purebred livestock.
- \* West Germany has announced dollar import tenders for oilseed residues and fishmeal, bloodmeal, and meatmeal. Its import tender for hog livers and kidneys has been broadened to include beef livers.

- \* Ireland will be granting import licenses for apples earlier this year than last: March 1 compared with April 1.
- \* Britain permits import and sale of apples, pears, peaches, pineapples, and melons carrying a residue of ortho-phenylphenol, a fungicide.
- \* Malaya has liberalized dollar imports of milk.
- \* Trinidad and Tobago have relaxed dollar import controls on wheat flour.

---

A new Title I, Public Law 480 agreement with Spain, announced January 14, covers \$96 million worth of agricultural commodities, mainly cottonseed and/or soybean oil, cotton, feed grains, and tobacco.

---

The Secretary of Agriculture has established sugar quotas for calendar year 1959 totaling 9.2 million short tons, raw value. This is the estimated amount needed to meet continental U. S. requirements. The 1959 figure is the same as the revised 1958 quota.

---

U. S. import duties on Philippine products and Philippine duties on U. S. products were raised January 1 in accordance with the United States-Philippine trade agreement. During 1959-61 Philippine imports from the United States are subject to half the regular Philippine duty as compared with one-fourth in 1956-58. U. S. duties on imports from the Philippines, which were assessed at 5 percent of the lowest rates applicable to imports from other countries in 1956-58, rise to 10 percent for 1959-61.

---

Brazil devalued its export exchange rates and set up 4 exchange classes effective January 10. Fixed rates were set for 3 of the 4 categories of commodities: (1) The new rate for coffee is 60 cruzeiros per U. S. dollar with no bonus compared with the previous effective rate of 50 (fixed rate of 37.06 plus variable bonus); (2) The new rate for cacao beans is 70 cruzeiros compared with 43.06 previously; (3) nearly all other commodities, which previously had a rate of 70 and 92 cruzeiros, are now combined into a new 100 cruzeiro category. Free market rates were established for all other commodities.

---

New Zealand trade officials, back from a visit to Communist China, reported that the Communist Chinese are interested in importing such items as wool, beef, hides and skins, dairy products, tallow, and seeds.

---

USDA is continuing and expanding the payment-in-kind export program for cotton for the marketing year which begins August 1, 1959. On that date, the CCC "direct sales" program is to be discontinued.

---

Exports of animals and animal products declined 6 percent. Total value, excluding private relief, dropped from \$254 million in July-December of 1957-58 to \$240 million in the corresponding period this fiscal year. Largest reductions were in dairy products, hides and skins, and animal fats. A small increase occurred in meats and meat products.

#### Marketing Year

**COTTON** Current season's cotton export situation has worsened. December exports are estimated at 255 thousand running bales in 1958, based on trade sources, compared with 609 thousand in 1957. August-December exports of 1,160 thousand bales this season contrasted with 2,333 thousand last season. At this rate, this season's total is not likely to exceed  $3\frac{1}{2}$  million bales as against 1957-58's 5.7 million. Early season estimates of large foreign production and reduced consumption are being confirmed. Price differences favoring foreign growths over comparable U. S. cotton are continuing.

**GRAINS and FEEDS** India and Europe have been taking more U. S. wheat. Exports of wheat and flour, excluding private relief, rose from 193 million bushels in the July-December period of 1957-58 to 200 million in the same period this year. The latter figure assumes 40 million bushels in December, when approximately 13 million were inspected for India. Shipments to India a year earlier were only 6 million bushels. In addition, more wheat is going to Europe this season, reflecting larger shipments of feed wheat.

Rice exports were up slightly. August-October milled rice exports were more than a third ahead of a year earlier. Exports were subsequently reduced as shipments under last year's Public Law 480 agreements were completed and no shipments were yet made under this year's authorization. December 1958's shipments are estimated at 35 million pounds compared with December 1957's 80 million. The August-December total was ahead by only 5 percent.

Growth in feed grain shipments continued. December 1958 estimate of 1.4 million short tons, excluding products and private relief, contrasts with 1 million a year earlier. July-December exports were 6.1 million tons this season as against 4.3 million last. Foreign demand, particularly in Europe and Japan, has continued at high levels. Argentina is likely to have little additional corn available for export until April or May. New U. S. Government-financed shipments will continue to bolster exports: Recent Title I agreement with Spain calls for approximately 248 thousand tons.

**VEGETABLE OILS and OILSEEDS** October-December soybean exports were ahead of a year earlier. With November and December soybean exports about the same this season as last, the 3-month gain reflects this year's larger October total. For October-December, assuming 13 million bushels for December, exports are estimated at 41 million bushels this season, 2 million more than last season.

total. Declines extended to all groups with the exception of feed grains and fruits. Feed grain exports of more than 10½ million short tons set a new record for any 12-month period.

Animal product exports were further reduced in 1958 by smaller domestic output and greater foreign competition. The export value in 1958, at \$470 million, excluding private relief, compares with \$566 million in 1957 and \$590 million in 1956. Reduced U. S. cattle slaughter decreased exports of meats, animal fats, and hides and skins. U. S. farmers have been undertaking more feeding operations to take advantage of higher livestock prices and lower feed prices. Increased foreign competition, resulting from production outpacing consumption, has been felt in world markets for dairy products and animal fats.

IMPORT HIGHLIGHTS

Fiscal Year

July-October imports were smaller in 1958-59 than in 1957-58. July-October agricultural imports, at \$1,236 million in 1958-59, compared with \$1,261 million in 1957-58. Complementary items were down \$99 million; supplementary, up \$74 million.

October-December soybean and cottonseed oil exports were reduced 10 percent. Soybean oil exports, lower priced and meeting strong foreign demand, nearly doubled during the first quarter this season over last. Cottonseed oil, on the other hand, encountered weaker foreign demand, and shipments lagged. October-December exports of both oils are estimated at 200 million pounds this year, 23 million under last season. However, with Title I sales expected to hit a new high, the season's total is likely to reach 1.3 billion pounds compared with 1.1 billion in 1957-58.

Calendar Year

U. S. agricultural exports declined 14 percent from 1957 to 1958. Total is estimated at \$3,875 million in calendar year 1958, sixth highest on record, compared with \$4,507 million in 1957, highest calendar year

# FOREIGN AGRICULTURAL TRADE

# Digest

OF THE UNITED STATES

MARCH 1959

Issued monthly by Foreign Agricultural Service, United States Department of Agriculture, Washington 25, D. C. Free within U. S. on request. Also available is the monthly Foreign Agricultural Trade Statistical Report, listing monthly and annual statistics on quantity and value of U. S. agricultural exports and imports, destinations, comparisons with previous year.

## EXPORT HIGHLIGHTS

Fiscal Year

July-February agricultural exports in 1958-59 were 6 percent less than in 1957-58. The July-February total is estimated at \$2,525 million this fiscal year compared with \$2,698 million last year. The largest reduction--\$266 million--was in cotton exports. Agricultural exports excluding cotton

U. S. Agricultural Exports July-February

1/ Partly revised. 2/ Partly estimated. 3/ Excludes private relief. 4/ Excludes products. 5/ Cottonseed and soybean. 6/ Mostly CCC donations.

increased by 4 percent, amounting to \$2,230 million in the current year as against \$2,137 million in the previous period. The reduction in cotton exports overshadowed decreases in soybeans, flaxseed, fruits, animal fats, hides and skins, and dairy products. Partly offsetting these declines, however, were increases in exports of wheat, feed grains, rice, edible vegetable oils, tobacco, meats, and vegetables. The largest single export gain--\$94 million--was in feed grains, principally grain sorghums and barley. Wheat and flour exports were up \$26 million; and edible vegetable oils rose by \$19 million.

February 1959 farm product exports are estimated at \$270 million. This total fell short of the \$310 million in January 1959 and the \$285 million in February 1958. Compared with a year earlier, February 1959 exports were larger for wheat, feed grains, soybeans, and edible vegetable oils but smaller for cotton, rice, and tobacco.

Principal foreign markets account for overall agricultural export lag.

U. S. agricultural exports to the industrialized and economically advanced countries have been reduced most this fiscal year. These markets make up the principal foreign outlets for U. S. farm products. According to data for the July-December period, largest export declines occurred for the United Kingdom, Japan, and West Germany. But, on the other hand, there were notable increases in exports to Spain, the Philippines, and France. (See table below.)

Marketing Year

Cotton

Cotton exports continued to lag in February. Cotton exports in February, as in other months this season, reflected the limiting of foreign purchases to short-run needs. The month's estimated export total of 260 thousand running bales, according to a trade source, compared with 450 thousand in February 1958. The total for August-February is estimated at 1.7 million bales this season, about half as much as in the same period of 1957-58. Foreign cotton production has set a new record again this season, and the steady increase in cotton consumption has been slowed in foreign exporting countries and reversed in major foreign importing countries. Prices of most foreign growths have been lower than comparable qualities of U. S. cotton this season.

U. S. Agricultural Exports  
by Country of Destination  
July-December 1957 and 1958

Country	: 1957	: 1958	: Chg.

TOTAL	2,098.4	1,943.0	- 7

1/ Computed from unrounded data.

Grains and Feeds

Feed grain exports continued active in February. This season's stronger European demand for U. S. feed grains, particularly sorghum grains and barley, continued to bolster U. S. exports. Feed grain exports are estimated at more than 800 thousand short tons in February. Total for the July-February period was 7.8 million tons this fiscal year compared with 5.9 million last year. The unusually active European market promises a record level of U. S. feed grain exports for the entire season.

Wheat exports exceeded 30 million bushels again this February. Exports of wheat and flour, excluding private relief, are estimated at 34 million bushels in February 1959, 7 million more than in February 1958. February was the seventh consecutive month in which wheat exports surpassed 30 mil-

lion bushels. July-February exports totaled 270 million bushels this fiscal year compared with 246 million last year. Much of the increase is the result of shipments to India and Brazil under Title I of Public Law 480.

# TRADE NEWS ROUNDUP

March 13, 1959

The U. S. exhibit of agricultural commodities shown in New Delhi, India, in December is now being displayed in Calcutta (March 15-April 15) and will be repeated in Madras during August and September. The USDA-industry display features a milk-recombining unit, wheat products, and soybean products.

A recent innovation in the USDA trade fair program is a mobile exhibit, which facilitates transport of displays from place to place. Four trailer-mounted units--including the giant lifelike steer, "The Champ," described in last month's TNR--have begun to tour Italian cities and rural areas. The tour may be extended to include appearances at trade fairs elsewhere in Europe.

The mobile exhibit is making its first appearance at the Verona International Agricultural Trade Fair, which opened March 8. An estimated 15 thousand farmers and trade people attended on opening day. The mobile exhibit emphasizes the balanced feeding of livestock and poultry. The Fair runs through March 16.

---

USDA and the Soybean Council of America, in cooperation with other private organizations, are sponsoring an international feed grain conference in Washington, May 4-6. The conference will be part of a market development program designed to promote greater use of U. S. feedstuffs in Europe. Participants will include representatives from most countries of Western Europe and experts in feeding and animal nutrition. The conference will be followed by a field trip through the Midwest, which will include visits to Land Grant institutions, Federal and private laboratories, packing plants, and feed manufacturers.

---

A 20-percent increase from 1957 to 1958 in West Germany's poultry consumption, accompanied by only a slight increase in poultry production, brightens prospects for U. S. poultry exports this year. While U. S. stewing chickens continued to make up the bulk of West German purchases, demand for broilers and turkeys increased sharply during the last half of 1958.

---

FAS has published a series of reports on prospects for foreign trade in cotton; dairy products; food and feed grains, dry beans, dry peas, seeds, and hops; fruits, vegetables, and tree nuts; livestock and meat; and oilseeds and oilseed products. A report for tobacco will soon be issued. Single copies may be obtained from the Foreign Agricultural Service, U. S. Department of Agriculture, Washington 25, D. C.

---

Further easing of foreign import restrictions affects U. S. farm exports:

- \* France has liberalized imports of oilcake and meal, egg yolks, sausage casings, flower bulbs, sugarbeet seed, and casein from the United States and Canada.
- \* West Germany has liberalized dollar imports of dried fruits, fruit preserves, citrus juices, clover and other seeds, pulses, meat products, and poultry offals.
- \* Denmark has liberalized imports of fresh lemons.
- \* Guatemala no longer requires flour imports to be tied to local purchases.
- \* Peru has extended the duty exemption on wheat imports to December 31.

—————○—————

Two new Title I Public Law 480 agreements were announced in February:

- \* Turkey--\$35 million for soybean and/or cottonseed oil, rice, dry edible beans, nonfat dry milk, and anhydrous milk fat.
- \* Uruguay--\$10 million for tobacco and cotton.

—————○—————

Barter contracts involving agricultural commodities (including cotton, corn, wheat, and rice) with an export value of \$27 million were negotiated by the Commodity Credit Corporation in October-December 1958. This compares with \$5 million in the corresponding quarter a year earlier.

—————○—————

The U. S. lamb and sheep industry, concerned about the increase in imports, has been keeping in touch with the situation abroad. A group of 18 leading U. S. lamb producers visited New Zealand recently to appraise that country's lamb shipments to the United States. Another group, consisting mainly of U. S. farm leaders, has returned from New Zealand where it studied the sheep industry.

—————○—————

The U. S. Tariff Commission will hold a public hearing in Washington on June 30 on imports of carpet wool and wool for paper-makers felts.

—————○—————

Corrections: Brazil's revised exchange rate for castor beans should have been given (TNR, February 1959) as 70 cruzeiros per U. S. dollar.

Outlook for citrus exports to Europe (TNR, February 1959) was for exports by major U. S. competitors and not for exports from the United States.

—————○—————

## Tobacco

July-February tobacco exports were 2 percent ahead this year. Exports of unmanufactured tobacco are estimated at 17 million pounds in February 1959, 6 million less than a year earlier. Export weight for the July-February period is estimated at 365 million pounds, 2 percent ahead of a year earlier. The increase reflected larger availabilities from the 1958 crop of U. S. flue-cured leaf and smaller-than-expected export supplies in Canada and Rhodesia, together with continued growth in cigarette use abroad.

## Vegetable Oils and Oilseeds

October-February soybean exports this year are estimated at 8 percent ahead of last year. With February 1959 exports of soybeans substantially above a year earlier, the cumulative total for the October-February period is estimated at 55 million bushels this season compared with 51 million last year. Foreign importers apparently prefer to crush soybeans and are finding good markets for both meal and oil. A weak meal market would probably increase foreign import preference for oil over beans. It is expected that exports will set a new record for the entire season somewhat above the 85 million bushels in each of the past 2 years.

October-January edible vegetable oil exports were 10 percent ahead of last year's unusually high level. Total exports of edible vegetable oils for the October-January period were 324 million pounds this season against 295 million last season. This year's good showing is due to Government export programs. With Title I Public Law 480 sales of vegetable oils expected to hit a new high, the season's total may reach 1.3 billion pounds this year compared with 1.1 billion in 1957-58.

## Pulses

Early-season rate of pea exports is not likely to be maintained. Although dry field peas are in tight supply as a result of the smaller 1958 U. S. crop, export demand has been very active due to the lower supplies available in several areas abroad, particularly in Europe. September-January exports of 76 million pounds this season compared with 36 million in 1957-58. However, the season's total is expected to be about 90 million pounds, 22 million less than last year. It may become necessary to import greater-than-usual amounts of seed peas.

## Meats

Variety meats are in a favorable export position. Although exports of variety meats dropped from 91 million pounds in calendar year 1957 to 70 million in 1958 (product weight), the reduction took place in the first half of 1958. Second half exports were higher than a year earlier and indicate an optimistic outlook for 1959.

Reduced U. S. cattle slaughter limited beef exports. U. S. farmers undertook more feeding operations in 1958 in order to take advantage of higher domestic livestock prices and lower feed prices. They also restocked

herds following reductions due to drought in the previous year. Although the result was the smallest U. S. export of beef since 1952, the decline was from unusually high levels in 1956 and 1957, which included large shipments under Title I of Public Law 480. Calendar year 1958 exports of 25 million pounds (product weight) compared with 1957's 89 million pounds.

#### Dairy Products

Cheese exports remained high in 1958 despite a drop in CCC donations. Cheese exports of 157 million pounds in calendar year 1958 compared with 172 million in 1957. About three-fourths of the reduction is attributed to reduced private relief donations stemming from smaller CCC availabilities for export.

Filled milk partly displaced U. S. evaporated milk in the Philippines. Total U. S. exports of evaporated milk declined from 164 million pounds in calendar year 1957 to 130 million in 1958, the smallest volume since exports of 97 million pounds in 1952. Last year's major development was the displacement of part of the evaporated milk by filled canned milk (a local product of nonfat dry milk solids and vegetable fat) in the Philippine market. Philippine filled milk retailed at prices one-third under those for U. S. evaporated milk.

#### I M P O R T     H I G H L I G H T S

July-December agricultural imports this year were slightly behind last year. July-December agricultural imports ran \$1,921 million in fiscal year 1958-59, \$47 million less than in the like period of 1957-58. Supplementary items rose by \$114 million while complementary products fell by \$161 million. Main complementary value losses were in coffee and rubber. There were large supplementary value gains in cattle, meats, and cane sugar along with moderate increases in tobacco and hides and skins. Part of these gains was offset by reductions for cotton, barley, and oats.

December complementary agricultural imports were down in 1958 from 1957. The value of U. S. supplementary and complementary agricultural imports fell from \$376 million in December 1957 to \$369 million in December 1958. The complementary import value declined by \$29 million, reflecting smaller takings of coffee that were partly offset by a larger import of carpet wool, cocoa beans, and tea. Supplementary imports advanced \$22 million, reflecting mainly larger imports of livestock products and cane sugar. The increase in supplementary imports was partly offset by less cotton, oats, vegetable oils, fats, and waxes. Agricultural imports in calendar year 1958 totaled \$3,883 million, 2 percent under 1957 and the smallest in 9 years.

Smaller U. S. output and higher prices stimulated cattle and meat imports. Reduced meat output and higher prices in the United States have made the domestic market attractive for imports of meat and cattle. July-December dutiable cattle imports were up one-fifth in 1958 over 1957. Beef and veal imports were 70 percent larger; they consisted mostly of boneless beef used in making frankfurters, bologna, and hamburger, and came mainly from New Zealand, Mexico, Canada, and Ireland. Pork imports, mainly European specialty products, were close to 60 percent larger. (See page 8.)

# FOREIGN AGRICULTURAL TRADE

OF THE UNITED STATES

# Digest

APRIL 1959

Issued monthly by Foreign Agricultural Service, United States Department of Agriculture, Washington 25, D. C. Free within U. S. on request. Also available is the monthly Foreign Agricultural Trade Statistical Report, listing monthly and annual statistics on quantity and value of U. S. agricultural exports and imports, destinations, comparisons with previous year.

## EXPORT HIGHLIGHTS

### Fiscal Year

July-March agricultural exports in 1958-59 were 7 percent less than in 1957-58. The 9-month total is estimated at \$2.8 billion this fiscal year compared with \$3 billion last year. This year's total includes an actual figure of \$2,502 million for July-February and an estimate of \$290 million for March, 10 percent under the \$315 million a year earlier.

### U. S. Agricultural Exports

#### July-March

TOTAL	3,014	2,790	- 7

1/ Partly revised. 2/ Partly estimated. 3/ Excludes private relief. 4/ Excludes products. 5/ Cottonseed and soybean. 6/ Mostly CCC donations.

Agricultural exports excluding cotton increased by 4 percent. July-March cotton exports this year are estimated at about half as much as last year. Excluding cotton, July-March exports increased from \$2.4 billion to \$2.5 billion. Spearheading the gain in exports other than cotton were feed grains which climbed from \$288 million to \$400 million. Other gainers were wheat, tobacco, edible vegetable oils, vegetables and preparations, and meats. There were declines in rice, fruits and preparations, hides and skins, and dairy products.

### Marketing Year

**COTTON** Cotton is moving abroad at half of last season's rate. Exports of about 1.8 million running bales in the first 8 months of the 1958-59 season were 53 percent below the 3.8 million shipped in the same period last season. This season's total may not exceed 3 million bales. As reported previously, the decrease

reflects larger exportable world supplies, weaker foreign demand, and underselling of most U. S. qualities by foreign growths. Exports of lower priced foreign growths this season and lower U. S. support prices announced for the 1959-60 season may keep U. S. exports at a relatively low level for the remainder of this season. The outlook is for a substantial rise next season. USDA announced in February that prices of U. S. cotton for export next season would be kept competitive on world markets.

**GRAINS and FEEDS** Feed grain exports are still outpacing year-ago levels.

This season's record European demand for U. S. feed grains, particularly sorghum grains and barley, still is the principal factor helping to offset some of the slackening in cotton exports. Feed grain shipments are estimated at 800 thousand short tons this March, 300 thousand more than a year earlier. The July-March total, excluding products, is estimated at 8.7 million tons this fiscal year compared with 6.4 million last year. It is estimated that exports including products will reach a record 11 million tons for the year ending in June.

March 1959 wheat exports were unusually heavy. Exports of wheat and wheat flour, including welfare donations, are estimated at 44 million bushels in March 1959, 10 million more than a year earlier. This may turn out to be the largest monthly export since June 1957's 57 million bushels. The July-March total is estimated at 326 million bushels this fiscal year compared with 288 million last year. This year's total includes an increase of 30 million bushels to India under Title I of Public Law 480. In addition, more wheat was shipped to Brazil and Europe and less to Japan.

**TOBACCO** Tobacco exports now total about the same as last year. The gain earlier this fiscal year was largely lost with the much smaller February export volume. A smaller March 1959 volume is also indicated. July-March shipments are estimated at 395 million pounds this year, about the same as last year. For the year ending in June, a total of 470 million pounds is expected, about as much as in 1957-58.

**ANIMAL FATS** Lard exports have been improving as prices became more competitive. The export improvement has been coming about mainly as a result of lower export prices due to larger domestic supplies. In addition, U. S. lard marketings in Cuba have been returning to normal. January-March lard exports to all countries were an estimated 150 million pounds this year, up 44 million from last year.

**FRUITS** Less prunes have been available for export. This season's much smaller U. S. dried prune crop has been sharply limiting exports. The 1958 crop of 194 million pounds was 58 percent as large as that in 1957. September-February exports of 41 million pounds in the current season were 56 percent as much as in the previous one.

**PULSES** More dry beans have been available for export. U. S. dry bean production in the 1958 season amounted to 1.9 billion pounds, 22 percent more than in 1957. August-February exports rose to 147 million pounds, 34 percent larger than a year earlier.

# TRADE NEWS ROUNDUP

April 27

1959

President Eisenhower's Food for Peace plan will be discussed at a 2-day conference in Washington, May 5-6. Taking part will be cabinet representatives from 5 major wheat exporting countries--Argentina, Australia, Canada, France, and the United States--and the Director General of FAO. A preliminary meeting of officials of the same countries is being held in Washington now to outline the discussion areas for the May conference. Purpose of the conference is to explore practical means of utilizing agricultural surpluses of producing nations in the interest of reinforcing peace and the wellbeing of friendly peoples throughout the world.

Sixty percent of the  $5\frac{1}{2}$  million tons of surplus foods donated by USDA during the past  $6\frac{1}{2}$  years has been distributed to needy persons in foreign countries. Donations exported were equivalent in export market value to less than 4 percent of all U. S. agricultural exports during this period. Under USDA's direct distribution program, CCC donates surplus foods to U. S. voluntary relief agencies which in turn distribute them to needy persons abroad.

The United States and the Soviet Union are expected to be the principal gainers in increased world wheat exports in 1958-59. World exports, it is estimated, will exceed 1,200 million bushels, 50 million more than in 1957-58 but below the record 1,330 million in 1956-57. Increased exports are in sight also for Australia, Argentina, Canada, Spain, and Turkey. Largest decline will be shown by France, whose crop was hurt by bad weather. This year's export increase is moving mainly to India and Europe.

U. S. exporters of quality apples, despite greater transportation costs, are proving that they can maintain their share of the British market if they are allowed to compete on an equal footing with other suppliers. With all supplying countries free to compete within the British apple import quota this season, U. S. exports to Britain in the July-February period increased from 407 thousand boxes in 1957-58 to 568 thousand in 1958-59, a gain of 40 percent.

Burma is importing soybean oil from the United States for the first time. About 11 million pounds--for cooking use--will go under Title I.

Consultations between the Colombian Government, the U. S. poultry industry, and USDA representatives have led to a decision by Colombia to permit imports of qualified poultry breeding stock. Until recently, poultry imports were prohibited. Preliminary indications are that imports of breeding stock under the new arrangement will amount to about \$40,000 per year.

## IMPORT HIGHLIGHTS

July-February agricultural imports were \$49 million less in 1958-59 than in 1957-58. The 8-month total fell from \$2,632 million last year to \$2,583 million this year. Complementary imports were \$173 million under a year earlier. Principal value declines were in coffee and rubber, with the former reflecting lower prices. Carpet wool imports were unchanged in value although up 38 percent in volume. Cocoa beans were up slightly in value but off 11 percent in volume. Supplementary imports gained \$123 million, reflecting mainly larger imports of livestock products and cane sugar. These increases were partly offset by reductions in cotton and grains.

Home market attracted more imported livestock and meat. Decreased U. S. cattle slaughter, higher U. S. prices, and increased foreign production were the main factors in the larger movement of imported livestock and meat into the U. S. market in fiscal 1958-59 than in 1957-58. Dutiable cattle imports in July-February increased from 722 thousand head to 776 thousand; however, the monthly trend after October 1958 was appreciably under a year earlier. July-February beef and veal imports advanced from 222 million to 346 million pounds. Pork imports, mostly specialty products from Europe, climbed from 89 million to 129 million pounds. Imports of hides and skins rose from 69 million to 99 million pounds.

The United States imported more Cuban sugar. U. S. sugar quota adjustments in 1958 to allow for smaller Hawaiian and Puerto Rican output and for increased U. S. population resulted in larger imports of sugar this fiscal year, primarily from Cuba. July-February imports from all countries totaled 2,762 thousand short tons in 1958-59 compared with 2,659 thousand in 1957-58. The import rise occurred in the first half of the fiscal year; in January and February 1959, imports were well under a year earlier.

Cotton import drop this year reflected mainly revision in trade data. Most of the 58-thousand bale reduction in July-February cotton imports from 183 thousand in 1957-58 to 125 thousand in 1958-59 was due to an upward revision in the import-for-consumption statistics for the former year. They were revised to include 47 thousand bales of Egyptian cotton released from the national stockpile and charged to the import quota for extra-long-staple cotton for the quota year ending July 31, 1957.

Less grain was purchased abroad this year. Grains moved into the United States in smaller volume in 1958-59 than in 1957-58 because of lower prices here as compared with Canada. July-February imports of oats fell from 18 million bushels to 3 million; barley, from 15 million bushels to 8 million; and wheat, from 7 million bushels to 5 million.

Coffee imports reflected buyers' uncertainty about prices. Because U. S. coffee buyers were uncertain about prices, they limited imports in 1958-59 close to the level of the previous year. July-February imports amounted to 1,853 million pounds this year compared with 1,812 million last year. This year's import value was 15 percent smaller, however, because of the lower prices. After lagging for 3 months, coffee imports increased over a year earlier in February 1959 by more than 50 percent in volume.

MAY 1959

Issued monthly by Foreign Agricultural Service, United States Department of Agriculture, Washington 25, D. C. Free within U. S. on request. Also available is the monthly Foreign Agricultural Trade Statistical Report, listing monthly and annual statistics on quantity and value of U. S. agricultural exports and imports, destinations, comparisons with previous year.

## EXPORT HIGHLIGHTS

### Fiscal Year

July-April agricultural exports in 1958-59 were 8 percent less than in 1957-58. The export value for the first 10 months is estimated at \$3,080 million in the current fiscal year, \$250 million under the \$3,330 million in the previous fiscal year. This year's total includes an actual figure of \$2,794 million for July through March and an estimate of \$286 million for April, 10 percent under the \$316 million in April 1958.

1/ Partly revised. 2/ Partly estimated.  
3/ Excludes private relief. 4/ Excludes products.  
5/ Cottonseed and soybean.  
6/ Mostly CCC donations.

Agricultural exports, excluding cotton, continued to run 4 percent ahead. July-April cotton exports are estimated at \$350 million this fiscal year, 51 percent below the value last year. The decrease reflects larger exportable world supplies, weaker foreign demand, and underselling of most U. S. qualities by foreign growths. Excluding cotton, exports totaled \$2,730 million this year compared with \$2,626 million in 1957-58.

Exports, excluding cotton and feed grains, are running about as high this year as last year. From the start of the year, the principal bolstering factor in agricultural exports has been the unusually high level of feed grain shipments, mainly sorghum grains and barley. July-April feed grain shipments were \$440 million this year, 36 percent more than the \$324 million last year. This has

come about mainly as a result of a strong increase in European demand this season. Excluding feed grains as well as cotton, July-April agricultural exports amounted to \$2,290 million this year, only one-half of 1 percent below the \$2,302 million last year.

If May and June are average months, the fiscal year's total will be \$3,700 million. Through April, this fiscal year's agricultural exports averaged \$308 million a month. The lowest monthly figure is the \$286-million estimate for April while the highest was the \$359 million reached last October. If May and June exports run at the average rate of \$308 million, the year's total will be \$3,700 million, 3 percent under the estimate of \$3,800 million made last fall when the outlook was for a higher level of cotton exports than now being realized. An export total of \$3,700 million would be the sixth highest on record.

Cotton was the main factor in reduced exports to leading markets. Among the 18 major markets (see table below) July-March agricultural exports were reduced to 8, increased to 5, and either unchanged or changed to a minor degree to 5. Combined shipments were \$162 million less to the United Kingdom, Japan, and West Germany--3 of the 5 best foreign markets and all 3 big cotton buyers. Exports to Canada, second largest market in the three-quarter period, held firm while those to India, the fifth largest market, increased by \$36 million, reflecting heavy Title I wheat shipments.

Reduced exports to Italy and Belgium, the ninth and tenth markets, also reflected this year's special cotton situation.

U. S. Agricultural Exports  
by Country of Destination  
July-March

Country	: 1957- : 58	: 1958- : 59	: Chg.
	\$ Million		%
United Kingdom	368.7	320.6	-13
Canada	248.6	247.7	0
Japan	305.2	242.4	-21

Pakistan	58.5	18.8	-68
Other	647.5	597.0	- 8
TOTAL	3,014.0	2,793.9	- 7

Title I Public Law 480 activity also  
figured in major country shifts.

With about one-sixth of agricultural exports moving under Title I of Public Law 480, shifts in Title I activity tend to influence the volume of exports to individual countries. This year July-March exports to several major markets, in addition to India, increased or decreased in response to Title I program activity. Mexico purchased less Title I corn; Poland, less wheat and cotton; and Pakistan, less rice and wheat. On the other hand, Spain bought more Title I edible vegetable oils; and Yugoslavia, more wheat. The increased exports to France reflected larger commercial purchases of U. S. feed grains.

# TRADE NEWS ROUNDUP

May 25, 1959

A team of 7 State agricultural extension workers, accompanied by USDA officials, departed May 23 for Western Europe to undertake a study of foreign trade developments and agricultural market requirements. The study project is being conducted by FAS and the Federal Extension Service. Findings will be brought before agricultural groups across the nation as part of USDA's broad program to help U. S. agriculture maintain and expand its foreign markets.

---

Interest in U. S. poultry breeding stock is showing up in Denmark. A North Jutland poultry cooperative has proposed joining with 3 other cooperatives in requesting the Ministry of Agriculture to permit imports of poultry breeding stock and has expressed interest in U. S. stock. Increased European demand for U. S. stock has followed expansion of demand for U. S. poultry meats. U. S. exports of such meats to Europe climbed from 425 thousand pounds in 1954 to over 23 million in 1958.

---

The Export-Import Bank has announced a \$600 thousand credit to Honduras to finance the purchase of purebred beef and dairy cattle in the United States to improve herds in Honduras. Traders may communicate with the Banco Nacional de Fomento, Tegucigalpa, Honduras.

---

Further easing of foreign import restrictions affecting U. S. farm exports include: Denmark--cheese, casein, and citrus fruit other than lemons (which were eased previously); West Germany--apples; Jamaica--canned peaches, pears, and fruit cocktail; Union of South Africa--rice; New Zealand--canned deciduous fruit.

---

The 37 countries in the General Agreement on Tariffs and Trade (GATT) are meeting this month in Geneva, Switzerland, for the 14th Session of the Contracting Parties. The United States will continue to press for less discrimination against U. S. farm products. U. S. exporters still encounter many trade barriers despite the virtual ending of the dollar shortage in the economically more developed countries and the achievement of varying degrees of trade liberalization.

---

USDA announced on May 5 a supplemental Title I, Public Law 480 agreement for the sale to the United Arab Republic of \$23-million worth of agricultural commodities including tobacco, rice, edible vegetable oil, feed grains, frozen poultry, nonfat dry milk, and anhydrous milk fat.

## IMPORT HIGHLIGHTS

March agricultural imports registered a \$54-million gain in 1959 over 1958. U. S. agricultural imports amounted to \$371 million in March 1959, 17 percent more than the \$317 million in March 1958. March imports were the largest this fiscal year. Supplementary (somewhat competitive) items increased by \$25 million, with gains mainly in hides and skins, meats, apparel wool, copra, and tobacco partly offset by declines in dutiable cattle and cane sugar. Complementary (noncompetitive) items increased by \$28 million, primarily carpet wool, bananas, coffee, and crude rubber. Less cocoa beans were imported.

July-March agricultural imports this year were about the same as last year. The 9-month total was \$2,954 million in the current fiscal year as compared with \$2,950 million in the previous year. An increase in supplementary items was almost fully offset by a decline in complementary items:

- \* Supplementary imports totaled \$1,476 million this fiscal year, 11 percent more than the \$1,328 million last year. For this 9-month period there were increases in imports of dutiable cattle, hides and skins, meats, cane sugar, and unmanufactured tobacco and reductions in cotton and feed grains.

- \* Complementary imports amounted to \$1,478 million this year, 9 percent under the \$1,622 million last year. Nine-month totals were smaller for silk, coffee, and crude rubber and larger for carpet wool.

Increased meat imports supplemented somewhat scarce domestic supplies. July-March imports of beef and veal totaled 374 million pounds (product weight) this fiscal year compared with 249 million last year. Most of the rise was accounted for by boneless beef, veal, and mutton. Main reasons for the gain were the relatively low U. S. supplies and relatively high prices of processing- and manufacturing-type meats coupled with continued strong domestic demand for them. The sharp increases in prices of low-grade meat encouraged U. S. processors to look to foreign sources of supply and stimulated foreign shippers, especially in New Zealand, Australia, and Argentina, to send more meat to the United States. July-March imports of pork rose to 146 million pounds in 1958-59 from 102 million pounds in 1957-58. This increase was chiefly due to the availability of plentiful pork supplies in Canada.

July-March cotton imports this fiscal year included mainly 1958-59 quota year entries while last fiscal year they included large portions of both 1956-57 and 1957-58 quota year entries. Imports of unmanufactured cotton amounted to 129 thousand bales (480 pounds net) in July-March of 1958-59 compared with 187 thousand in July-March of 1957-58. Last fiscal year's total included large portions of both the 1956-57 and 1957-58 quota years' imports of long staple cotton. The long staple quota is 95 thousand bales for an August 1-July 31 year while the short staple quota is 30 thousand bales on a September 20-September 19 year. In the current fiscal year, July-March imports included mostly cotton entries under the 1958-59 quota which has been largely filled.

# FOREIGN AGRICULTURAL TRADE

OF THE UNITED STATES

# Digest

JUNE 1959

Issued monthly by Foreign Agricultural Service, United States Department of Agriculture, Washington 25, D. C. Free within U. S. on request. Also available is the monthly Foreign Agricultural Trade Statistical Report, listing monthly and annual statistics on quantity and value of U. S. agricultural exports and imports, destinations, comparisons with previous year.

## EXPORT HIGHLIGHTS

### Fiscal Year

July-May agricultural exports in 1958-59 were 7 percent less than in 1957-58. U. S. agricultural exports are estimated at \$3,400 million in the first 11 months of fiscal year 1958-59, \$274 million less than the \$3,674 million in the corresponding period a year earlier. The 11-month total in 1958-59 in-

cludes an actual figure of \$3,090 million for the July-April period and an estimate of \$310 million for May. The May estimate in 1959 compares with exports of \$345 million in 1958.

### U. S. agricultural exports, July-April

Private relief 6/	151	115	-24
Other 3/	109	105	- 4
TOTAL	3,674	3,400	- 7

Agricultural exports are headed for a \$3,700-million total in 1958-59. If the \$3,400-million estimate for the first 11 months is realized and if June's total approximates \$300 million, exports in 1958-59 are expected to total \$3,700 million, sixth largest on record.

Exports, excluding cotton, in 1958-59 were 4 percent ahead of 1957-58. Exports of cotton in 1958-59 amounted to only half of what they were a year earlier. Reduced foreign demand for U. S. cotton in 1958-59 reflected several factors: (1) Larger beginning cotton stocks and production in foreign exporting countries, (2) weaker demand for and larger

1/ Partly revised. 2/ Partly estimated.  
3/ Excludes private relief. 4/ Excludes products. 5/ Cotton and soybean.  
6/ Mostly CCC donations.

inventories of foreign textile goods, (3) substantially lower prices for most foreign growths compared with equivalent qualities of U. S. cotton, and (4) prospects for larger production of and lower export prices for U. S. cotton next season. Excluding cotton, July-May agricultural exports totaled \$3,015 million in 1958-59 compared with \$2,894 million in 1957-58.

Exports, excluding cotton and feed grains, equaled 1957-58 level. July-May agricultural exports, excluding cotton and feed grains, are estimated at \$2,535 million in 1958-59, about equal to the \$2,533 million a year earlier. A strong increase in European demand for feed grains, mainly sorghum grains and barley, boosted U. S. exports of feed grains in 1958-59 to a new record of over 10 million short tons. Without the one-third increase in feed grains, exports of all agricultural commodities in 1958-59 would have been 11 percent behind 1957-58.

Title I has stimulated wheat exports to India. Assuming exports of 40 million bushels of wheat and grain equivalent of flour in May 1959, July-May wheat exports, excluding CCC donations to private welfare agencies, totaled 385 million bushels in 1958-59 compared with 311 million in the previous year. Some of the increase was accounted for by larger shipments to Brazil and Europe, but the bulk of the gain came from Title I exports to India. This program from its inception has enabled India to obtain greatly needed supplies of wheat. Its need for imported wheat has been especially great this past year, following the short 1957-58 crop and the resulting rise in prices. Economic development has stimulated consumption, and that country has sought to build up operating stocks in an attempt to minimize hand-to-mouth buying.

Less U. S. fruits were exported. U. S. shipments of fruits and preparations in July-May are estimated at \$205 million in 1958-59, 14 percent under a year earlier. Exports of fresh apples were down in value by more than half; those of fresh pears and lemons were reduced by two-fifths; and those of dried prunes were smaller by one-fifth. Declines in these commodities, reflecting mainly smaller sales to Europe, more than offset the increase in sales of California Navel oranges to Canada.

#### Marketing Year

Lower prices have stimulated exports of animal fats and red meats. Increased supplies and lower prices in recent months have helped to expand 1959 sales abroad of animal fats and red meats. January-May lard exports are estimated at 225 million pounds in 1959 compared with 165 million in 1958. More lard moved to Cuba as marketings returned to normal, and larger sales to the United Kingdom and West Germany were encouraged by competitive prices. Exports of edible and inedible tallow are placed at 490 million pounds in 1959 against 341 million in 1958, with substantial gains recorded in the amount going to Italy. Shipments of pork and variety meats also improved. On the other hand, exports of beef remained low, and those of hides and skins fell sharply due to higher prices.

Greater foreign competition has weakened exports of most dairy products. The domestic supply and price situation has made it difficult to export most dairy products in 1959--mainly butter, cheese, evaporated milk, and

# TRADE NEWS ROUNDUP

June 19, 1959

As a result of short crops, Chile and the Union of South Africa are inquiring about availability and prices of U. S. beans. Chile usually exports from 500 thousand to 750 thousand bags while the Union normally exports about half of its annual output of 875 thousand bags.

---

Latest reports indicate that Argentina's rice crop, originally estimated at 110 thousand metric tons (rough), has been reduced by one-half and Uruguay's sunflower seed crop, first placed at 102 thousand short tons, has been cut by more than 50 percent--the result of recent bad weather.

---

Foreign actions affecting U. S. farm product exports: . . . The United Kingdom on June 8 liberalized dollar imports of a number of items including cheese, frozen beef tongues, nuts, live cattle, honey, vegetables, and selected fruits. . . . France has liberalized imports of summer oranges from sources other than OEEC countries, July 15-September 30. . . . Italy has lifted its beef and veal import embargo. . . . Sweden has reduced some duties on imports of live cattle and meats. . . . West Germany has issued a dollar import tender for Grade A fully eviscerated poultry. . . . Japan has announced a 35-percent increase in foreign exchange allocation for cotton imports April 1959-March 1960 compared with purchases in 1958-59.

---

USDA has issued a new bilingual egg grading certificate for shipments to Spanish-speaking countries. The new certificate is expected to help exporters better interpret foreign requirements.

---

USDA announced the following major Title I Public Law 480 agreements in June: . . . June 1: \$40 million with Indonesia for 150 thousand bales of cotton, 1.4 million cwt. of wheat flour, 1.2 million cwt. of rice, and 28 million pounds of nonfat dry milk. . . . June 9: \$13 million with Nationalist China for 4.5 million bushels of wheat, 5 million pounds of soybean or cottonseed oil, 4.4 million pounds of dairy products, and 3 million pounds of tobacco. . . . June 10: \$44 million with Poland for 7.3 million bushels of wheat, 9.2 million bushels of barley, 433 thousand bushels of corn or grain sorghums, 70.5 thousand bales of cotton, 33 million pounds of soybean or cottonseed oil, and 11 million pounds of nonfat dry milk. . . . June 15: \$33 million with Argentina for 165 million pounds of soybean or cottonseed oil and 770 thousand cwt. of rice.

Continued from page 2.

dried whole milk--particularly because of lower prices for competing products abroad. January-April cheese exports fell from 9 million pounds in 1958 to 3 million in 1959; evaporated milk, from 30 million to 17 million; and dried whole milk, from 11 million to 9 million.

Pea exports are completing excellent season. August-April dried pea exports totaled 125 million pounds in 1958-59 compared with 80 million a year earlier. Active export demand this season was due to lower supplies abroad, especially in Europe. Exports increased despite the relatively small 1958 U. S. crop. Large beginning stocks and European willingness to pay higher prices made the excellent export season possible.

October-May soybean exports ran one-fifth ahead of 1957-58. Except for December, monthly shipments of soybeans this season have exceeded those of a year earlier. The October-May export total is estimated at 79 million bushels in 1958-59, about one-fifth ahead of the 66 million of 1957-58. Large quantities again went to Western Europe, Japan, and Canada. The improved European demand stemmed from shorter copra supplies and reduced Northern European soybean stocks. Exports to Japan were up as a result of the break in trade relations with Communist China. It is expected that U. S. exports will set a new season record of more than 100 million bushels.

Government programs are stimulating edible vegetable oil exports. October-May exports of edible vegetable oils--cottonseed and soybean--are estimated at 685 million pounds this season compared with 672 million last season. This year's good showing is due to shipments under Title I of Public Law 480. Larger Title I exports are expected in the second half, and their total will reach a new high. All exports are expected to reach 1.4-1.5 billion pounds in 1958-59, 300-400 million more than a year earlier. Major purchasers are Spain, Turkey, and Yugoslavia.

#### I M P O R T     H I G H L I G H T S

April agricultural imports in 1959 were up slightly from 1958. Imports amounted to \$354 million in April 1959, 2 percent more than the \$348 million in April 1958. Supplementary (somewhat competitive) items increased by \$18 million, with gains mainly in beef and veal, vegetable oils, and hides and skins. Imports of cattle, cane sugar and barley (grain) declined. Complementary (noncompetitive) items fell by \$13 million. Imports of coffee dropped from \$116 million to \$84 million, but this decline was partly offset by increases in carpet wool and crude rubber.

July-April imports in 1958-59 were about the same as in 1957-58. The 10-month total was \$3,308 million in fiscal year 1958-59 as compared with \$3,298 million in 1957-58. Supplementary imports, up 11 percent, totaled \$1,664 million. Dutiable cattle, hides and skins, meats, cane sugar, and tobacco gained substantially. Reductions were mainly in cotton and feed grains. Complementary imports, down 9 percent, amounted to \$1,644 million. Silk, coffee, and crude rubber fell while carpet wool increased in value. The value of coffee imports in 1958-59 reflected lower prices inasmuch as volume increased by 6 percent over 1957-58.

# FOREIGN AGRICULTURAL TRADE

OF THE UNITED STATES

## Digest

JULY 1959

Issued monthly by Foreign Agricultural Service, United States Department of Agriculture, Washington 25, D. C. Free within U. S. on request. Also available is the monthly Foreign Agricultural Trade Statistical Report, listing monthly and annual statistics on quantity and value of U. S. agricultural exports and imports, destinations, comparisons with previous year.

### EXPORT HIGHLIGHTS

#### Fiscal Year

Agricultural exports were relatively large in fiscal year 1959. U. S. agricultural exports in the year ending June 30, 1959, are estimated at \$3,745 million (11 months actual, 1 estimated). June exports are estimated at \$330 million, about the same as a year earlier. The year's total was 6 percent less than that of \$4,002 million in fiscal year 1958. The alltime high was

\$4,728 million in 1957. Declines in cotton, fruits, dairy products, and hides and skins last year more than offset increases in grains, vegetable oils, oilseeds, vegetables, and meat. Exports of tobacco and animal fats did not vary much in value from 1958 to 1959 although animal fat volume was up.

Principal decline was in cotton. The big commodity drop from fiscal year 1958 to 1959 was in cotton; export value declined from \$841 million to \$410 million, 51 percent less. Reduced foreign demand for U. S. cotton reflected: (1) Larger beginning stocks and production in foreign exporting countries, (2) weaker demand for and larger inventories of foreign textile goods, (3) substantially lower prices for most foreign growths compared with equivalent qualities of U. S. cotton, and (4) prospects for larger production and lower export prices of U. S. cotton starting August 1, 1959.

1/ Partly revised. 2/ Partly estimated.  
3/ Excludes private relief. 4/ Excludes products. 5/ Cottonseed and soybean.  
6/ Mostly CCC donations.

Exports of feed grains and soybeans were at record highs in 1959. Feed grain exports were up about one-third in fiscal year 1959 over 1958. Exports of the four major grains--corn, barley, grain sorghums, and oats, excluding products--increased from 8.8 million short tons in 1958 to 11.7 million in 1959, a new record. There was a strong increase in European demand for U. S. feed grains, mainly sorghum and barley. Soybean exports were up one-sixth and also set a new record in 1959. Volume increased from 88 million bushels in 1958 to more than 100 million in 1959, with large quantities again going to Western Europe, Japan, and Canada. The improved European demand stemmed from shorter copra supplies there and reduced northern European oil stocks. Exports to Japan were up as a result of that country's break in trade relations with Communist China.

Wheat and rice exports improved substantially in 1959 over 1958. Exports of wheat and wheat flour, including welfare donations, which had fallen from a record 549 million bushels in fiscal year 1957 to 402 million in 1958, increased to 445 million in 1959 and were the fifth highest on record. Last year's wheat exports included larger shipments to Brazil and Europe, but the bulk of the gain came from expanded Title I Public Law 480 exports to India. At the same time, milled rice exports increased from 12 million bags in 1958 to 14 million in 1959, but were far short, however, of the 26-million-bag record attained in 1957.

Exports of fats and oils also improved. Exports of edible vegetable oils (cottonseed oil and soybean oil) increased from 922 million pounds in fiscal year 1958 to 1,150 million in 1959, second largest volume on record. Top figure was the 1,393 million pounds exported in 1957. The increase in exports last year reflected stepped up programming under Title I of Public Law 480 for Spain, Turkey, and Yugoslavia. Lard exports, which had fallen from 561 million pounds in 1957 to 399 million in 1958, increased to nearly 470 million in 1959. Tallow exports, which were at a record high of 1,361 million pounds in 1957, dropped to 1,096 million pounds in 1958 but then increased to 1,110 million in 1959. Greater domestic output and lower export prices began to stimulate exports of animal fats and oils in the latter half of fiscal year 1959.

Tobacco exports held at the 1958 level. Unmanufactured tobacco exports are estimated at 475 million pounds in fiscal year 1959, slightly above the 473 million in 1958. Shipments were maintained last year primarily because smaller supplies than anticipated were available from the current crop abroad--especially in Rhodesia. In addition, foreign consumption of cigarettes made substantial gains, particularly in Western Europe.

Fruit exports declined while vegetables gained. Exports of fruits and preparations fell from \$262 million in fiscal year 1958 to an estimated \$225 million in 1959, a drop of 14 percent, while exports of vegetables and preparations rose from \$120 million to \$135 million, a gain of 13 percent. Principal fruit losses were in fresh apples, pears, and lemons and in dried prunes. Larger exports of pulses mainly contributed to the increase in exports of vegetables. Last year's exports of dry edible peas were equivalent to 60 percent of the 1958 crop; beans, 18 percent.

Less livestock products were exported. Exports of livestock products were about the same in fiscal year 1959 as in 1958, or about \$480 million ex-

# TRADE NEWS ROUNDUP

July 22

1959

The Food for Peace Wheat Utilization Committee--established at the Food for Peace Conference in Washington early in May (see TNR, April 1959 DIGEST)--concluded a 3-day organizational meeting in Washington June 17. The Committee, composed of representatives of Argentina, Australia, Canada, France, and the United States (with the Food and Agriculture Organization in observer-advisor role) set up a working group to examine two subjects before its fall meeting: (1) to study U. S. foreign market development activities including the possibility of broadened participation, and (2) to consider the feasibility of joint projects and studies in relating wheat disposals to economic development programs.

---

Foreign actions affecting U. S. farm product exports: ...West Germany is granting dollar import licenses until August 14 for canned apricots, peaches, pears, fruit salad and fruit cocktail in cans under 11 pounds. ...Italy early in June dropped dollar import license requirements for some agricultural items including eggs, broken rice, breakfast cereals, and oilseeds for sowing. ...New Zealand is giving "individual consideration" for increased imports of dried vegetables, lemon juice, lemons, oranges, soybean oil, and linseed oil.

---

USDA sizes up the U. S. summer citrus export situation as follows: ... U. S. oranges and grapefruit will have stronger competition in Europe this season than last (May-November). Competing exports are expected to set postwar records. ...U. S. lemon situation is more favorable this summer than last. Competing supplies will be smaller all season (June-September), and European demand will be stronger in August and September.

---

USDA on June 30 announced a \$33-million Title I Public Law 480 agreement with the Republic of Korea for 12 million bushels of wheat, 60 thousand bales of cotton, and 400 thousand bushels of feed grains.

---

Peru has made a dollar purchase of 1,000 tons of U. S. soybean oil following a demonstration under a Section 104(a) market development project that U. S. oil is suitable for food uses. Reports indicate that the sale of an additional 4,000 tons is being negotiated--also for dollars.

---

Increasing quantities of U. S. variety meats are being exported to France. Exports of frozen pork livers, the principal item, have grown rapidly since 1950 and amounted to about 5 million pounds in 1958, nearly one-third of total French imports of this commodity.

---

The recent dry weather in Denmark, the Netherlands, Belgium, and West Germany has resulted in smaller feed supplies, increased livestock slaughter, and lowered milk production in these countries.

cluding welfare donations. Including welfare donations, livestock product exports declined from \$585 million to \$540 million, 8 percent less. Larger exports of meats and meat products were more than offset by substantial reductions in dairy products and in hides and skins. Smaller exports of cheese, especially under the USDA welfare donation program, accounted for most of the drop in dairy products, but substantially less evaporated milk was exported in 1959 than in 1958.

Agricultural exports under Government-financed programs were slightly larger. Agricultural exports under Government-financed programs approximated \$1,300 million in fiscal year 1959, slightly ahead of the \$1,250 million in 1958. There were gains in Title I, barter, and Mutual Security exports (including ICA foreign currency sales and economic aid). Relief shipments declined. Exports outside of Government-financed programs were about \$300 million less in 1959 than in 1958, accounting for 65 percent of farm product exports in 1959 compared with 69 percent in 1958. They included, in addition to unassisted commercial transactions, shipments of some commodities with governmental assistance in the form of (1) short-term credits, (2) sales of Government-owned commodities at less than domestic market prices, and (3) export payments in cash or in kind.

#### I M P O R T   H I G H L I G H T S

May agricultural imports in 1959 were up slightly from 1958. Imports of agricultural commodities amounted to \$361 million in May 1959--the latest month for which official data are available--6 percent more than the \$342 million in May 1958. Supplementary items increased by \$19 million, with gains mainly in dutiable cattle, beef and veal, hides and skins, and cane sugar. Imports of pork were down in value, but the quantity was about as large as in 1958. Imports of feed grains were down as were also molasses unfit for human consumption and canned pineapples. Complementary items were practically unchanged. Imports of coffee declined, but there were increases in other items, especially carpet wool, cocoa beans, and crude rubber. (See table on page 6.)

July-May imports were about the same as in 1958. The 11-month total for imports was \$3,668 million in fiscal year 1959 as compared with \$3,640 million in 1958. Supplementary imports, up 11 percent, totaled \$1,849 million, with beef and veal and pork increased by \$100 million in 1959 and dutiable cattle higher by \$15 million. More hides and skins and apparel wool also were imported in 1959. Among the vegetable products, there were increases in nuts, copra, oils, cane sugar, and tobacco; and decreases in cotton, jute, feed grains, and fresh tomatoes. Complementary imports, down 8 percent, amounted to \$1,820 million. Lower prices were a factor in increased quantities and lower values of imports in 1959 compared with 1958. Coffee volume rose 108 million pounds; value fell \$178 million. Rubber was up slightly in volume but value declined about \$12 million. Raw silk quantity remained about unchanged whereas value fell by more than \$2 million. On the other hand, imports of cocoa beans, reflecting shorter supplies and higher prices, were 23 million pounds less in volume but slightly larger in value. More bananas, tea, and spices were imported.

# FOREIGN AGRICULTURAL TRADE

# Digest

OF THE UNITED STATES

AUGUST 1959

Issued monthly by Foreign Agricultural Service, United States Department of Agriculture, Washington 25, D. C. Free within U. S. on request. Also available is the monthly Foreign Agricultural Trade Statistical Report, listing monthly and annual statistics on quantity and value of U. S. agricultural exports and imports, destinations, comparisons with previous year.

## EXPORT HIGHLIGHTS

### Fiscal Year

Agricultural exports in July 1959 are estimated at close to July 1958 level. July shipments of U. S. farm products are estimated at \$300 million in 1959, \$15 million less than a year earlier and \$5 million less than in June this year. Principal change this July from a year earlier was the 70-percent drop in exports of cotton, but there were reductions also in rye, rice, and tobacco. Foreign demand for cotton slackened further in July in anticipation of the start of the new export program on August 1. On the other hand, exports of wheat and wheat flour are estimated to have risen 48 percent in value; edible vegetable oils, 45 percent; vegetables and preparations, 36 percent; and soybeans, 25 percent. Exports of feed grains, fruits, and livestock products--already at relatively high levels--did not vary much from a year earlier.

Fiscal year 1959 preliminary total is \$3,720 million. Agricultural exports of \$3,720 million (preliminary total) in fiscal year 1959 are 7 percent under the

U. S. agricultural exports, July 1958 and  
1959

value of \$4,002 million in 1958 and 21 percent under the record of \$4,728 million in 1957. The total is 15 percent ahead of the 1950-54 average. (For latest data, see tables on pages 4, 5, and 6, this issue; for analysis, see previous issue.)

Over three-fourths of exports last year went to 17 countries. U. S. agricultural exports went to more than 100 countries in fiscal year 1959, with 17 of the countries taking 77 percent of the shipments. More than 40 percent of the total went to these 5 countries alone: The United Kingdom, Canada, Japan, West Germany, and India. The value of their takings exceeded \$1.5

billion. Exports to 3 of them were sharply below 1958: The United Kingdom, Japan, and West Germany. Exports also were less to Italy, the Republic of Korea, Mexico, and Poland. Leading gainers were the Netherlands, India, Spain, and Yugoslavia, with special export programs the chief factor for the last three. Exports to Canada showed a moderate gain. Cuba, Belgium, Venezuela, France, and the Philippines about maintained their takings. Substantially reduced takings of cotton caused Japan to drop into third place.

Nonagricultural shipments fell 8 percent in 1959. U. S. nonagricultural shipments declined from \$14,718 million in fiscal year 1958 to \$13,563 million in 1959, a reduction of 8 percent. The agricultural share of total exports increased from 21 percent in 1958 to 22 percent in 1959.

### Marketing Year

**COTTON** Last season's low level cotton exports are expected to be followed by substantial increase in 1959-60. The marketing year that ended July 31 saw cotton exports decline to a relatively low level. The estimated total of 2.8 million running bales (exports of 2,661 thousand for the first 11 months plus an estimate of 150 thousand for July) was half 1957-58's 5.7 million. A very substantial increase in cotton exports is indicated for the 1959-60 season. Promising factors include (1) registrations of 1,283 thousand bales under the 1959-60 payment-in-kind program as of August 21; (2) smaller foreign production in 1959-60; (3) smaller end-of-season stocks in foreign free

world countries than a year ago, especially in importing countries; (4) returning confidence in the stability of prices at lower levels, which should encourage rebuilding of raw cotton stocks in importing countries; and (5) rising consumption as the foreign textile recession diminishes and cotton's competitive position with manmade fibers improves.

**GRAINS** Brisk wheat export movement continued into July.

The brisk export movement of U. S. wheat that developed toward the close of the 1958-59 marketing season continued into July. The 41 million bushels of wheat and wheat flour (including private foreign donations) compared with 34 million in June 1959 and 26 million in July 1958. Exports during the past season totaled 442 million bushels, 10 percent higher than in 1957-58, but about 19 percent below the peak of 548 million in 1956-57. Last year's

# TRADE NEWS ROUNDUP

August 28

1959

Spain devalued the peseta July 20 to a rate of 60 to the dollar and also revised her trade policy as a part of a new economic stabilization program. Trade will be shifted from a bilateral to a multilateral basis as the balance of payments permits. Import restrictions are to be relaxed on a nondiscriminatory basis. Main agricultural items liberalized as of July 30 included flaxseed, crude or raw tallow, potatoes, seeds, and breeding stock.

---

Recent actions facilitating fruit exports: ...Canada has approved import of U. S. oranges colored with citrus red number 2 following establishment of tolerances by the U. S. Food and Drug Administration. ...Burma began to issue import licenses for U. S. canned and dried fruit on July 16. ...Italy announced August 12 that 1,000 metric tons of U. S. prunes would be imported in 1959-60--double last year's quota.

---

West Germany on July 1 liberalized imports of turkeys, onions, fresh peaches and plums, certain rice products, edible peanut and soybean oils, cornflakes and similar grain products, canned fruit and vegetable juices, and canned pineapples.

---

France announced July 23 that import liberalization had been extended to lemons, grapefruit, tangerines, raisins, tree nuts except walnuts, certain meats, and live poultry other than day-old chicks.

---

USDA on July 29 announced a \$58 million Title I Public Law 480 agreement with the United Arab Republic for over 29 million bushels of wheat and/or wheat flour.

---

The Export-Import Bank is lending Japan \$30 million to finance the purchase of U. S. raw cotton during the crop year that began August 1. This is the eleventh credit for cotton since 1947.

---

Dutch importers are showing more interest in U. S. ready-to-cook poultry following passage of a bill in the Netherlands to license the sale of such poultry in grocery and general food stores.

---

<sup>2/</sup> Less than \$500 thousand.

increase over the previous year was mostly in grain, with India taking about one-third of the total. Exports to India were up <sup>44</sup> million bushels. Yugoslavia and Brazil also took sizably larger quantities, and Egypt took 7 million bushels compared with none a year earlier. Japan, Pakistan, Poland, and West Germany took considerably less. Flour exports were up slightly, with about 23 percent in each year moving under relief or charity programs.

Rice exports to Europe increased markedly in 1958-59 season. Rice exports in the 1958-59 season are estimated at 13.8 million bags (exports of 12.3 million for the first 11 months plus an estimate of 1.5 million for July) compared with 12.9 million in 1957-58. Exports rose considerably toward the close of the season. Shipments to Europe showed a marked increase, accounted for mainly by West Germany and the United Kingdom. Larger shipments to Europe reflected aggressive U. S. market promotion, the payment-in-kind export program, and smaller supplies available from Egypt and other supplying areas. Exports to Africa also were substantially above previous years. French West Africa imported 438 thousand bags compared with none during the 1957-58 season. Other countries taking considerably more rice this past year were Ceylon and the Philippines.

## IMPORT HIGHLIGHTS

### Fiscal Year

Agricultural imports were 2 percent larger in 1959. U. S. agricultural imports for consumption in fiscal year 1959 totaled \$4,005 million compared with the 1958 total of \$3,929 million, an increase of 2 percent. The 1959 value is the sixth highest on record. Improvement in some imports last year reflected recovery from the domestic economic recession.

Supplementary imports increased 11 percent. Imports of supplementary items--commodities similar to those of U. S. agriculture--increased from \$1,824 million in 1958 to \$2,029 million in 1959, a gain of 11 percent. Largest value increases were in meats and in hides and skins. Other increases were in cattle, apparel wool, feeds and fodders, nuts, copra, vegetable oils and waxes, cane sugar, and tobacco. Imports of cotton, feed grains, and fresh tomatoes were smaller.

Reduction in complementary imports offset big part of supplementary gain. Imports of complementary (noncompetitive) items declined from \$2,105 million in 1958 to \$1,976 million in 1959, a reduction of 6 percent. Value reductions included principally coffee, although quantity rose in response to lower prices. The value decline for coffee more than offset gains for carpet wool, bananas, tea, and spices. Cocoa beans declined in volume, but higher prices strengthened value. Rubber rose more in quantity than in value.

SUPPLEMENTARY IMPORTS Cattle imports remained relatively high. Dutiable cattle imports, which had risen from 109 thousand head in fiscal year 1956 to 259 thousand in 1957, exceeded 1 million head in both 1958 and 1959. Most were feeders bought to supplement rather scarce U. S. supplies and to convert abundant feed into meat.

Higher U. S. prices attracted more foreign beef. Imports of beef and veal increased from 369 million pounds in 1958 to 527 million in 1959. Main reasons were the relatively low U. S. supplies and relatively high prices of processing- and manufacturing-type meats coupled with continued strong domestic demand.

Increased domestic demand raised imports of hides and skins. Volume rose from 119 million pounds in 1958 to 184 million in 1959 as domestic business activity picked up. Users of hides and skins turned to foreign suppliers, especially to obtain bovine hides and skins which were less plentiful in the domestic market in 1959 than in earlier years.

More pork was available from Canada. Imports of pork increased from 147 million pounds in fiscal year 1958 to 196 million in 1959. While they increased less sharply than other meats, the quantity from Canada increased considerably as supplies became plentiful there.

Rising mill consumption raised apparel wool imports. Imports of apparel wool mounted from 105 million pounds (actual weight) in fiscal year 1958 to 148 million in 1959.

Sugar imports rose to record high. Imports of cane sugar advanced from 4.5 million short tons in fiscal year 1958 to 4.6 million in 1959, a new record. Adjustments of the U. S. sugar quota during the year as demand increased enabled producing countries to sell more sugar here.

More foreign tobacco was needed to meet U. S. needs. Imports of unmanufactured tobacco increased from 126 million pounds in fiscal year 1958 to 152 million in 1959. More foreign leaf was required as U. S. cigarette manufacturers raised output over 1958 and used more oriental leaf in their blends.

Less cotton was imported in fiscal year 1959. Imports of unmanufactured cotton amounted to 137 thousand bales (480 pounds net) in fiscal year 1959 compared with 195 thousand in 1958. Imports in 1958 included large portions of both 1956-57 and 1957-58 quota-year long-staple imports. The long-staple quota is 95 thousand bales for an August 1-July 31 year while the short staple quota is 30 thousand bales on a September 20-September 19 year. Imports in 1959, on the other hand, included mostly cotton under the 1958-59 quota.

Lower U. S. prices discouraged feed grain imports. Imports of both barley (grain) and oats declined sharply in 1959, responding to the plentiful supplies and relatively lower prices in the domestic market as compared with those in Canada. Imports of wheat, mostly unfit for human consumption, also decreased.

COMPLEMENTARY IMPORTS Lower prices encouraged coffee imports in 1959.

Coffee imports increased from 2,701 million pounds in fiscal year 1958 to 2,839 million in 1959. Because of lower prices, value declined. Plentiful supplies last year forced world prices downward and encouraged U. S. importers to buy more.

Carpet wool imports increased. Imports of carpet wool rose from 142 million pounds in 1958 to 240 million in 1959, reflecting reduced prices abroad.

Smaller world supplies and rise in world prices weakened cocoa bean imports. Imports of cocoa beans declined from 461 million pounds in 1958 to 447 million in 1959; but, because of smaller world supplies, the imports that were made came in at higher prices. Consequently, the value of imports rose slightly.

Rubber imports increased as more automobiles were produced. After 3 years of declines, imports of crude natural rubber increased from 1,148 million pounds in 1958 to 1,201 million in 1959.

# FOREIGN AGRICULTURAL TRADE

OF THE UNITED STATES

# Digest

SEPTEMBER 1959

Issued monthly by Foreign Agricultural Service, United States Department of Agriculture, Washington 25, D. C. Free within U. S. on request. Also available is the monthly Foreign Agricultural Trade Statistical Report, listing monthly and annual statistics on quantity and value of U. S. agricultural exports and imports, destinations, comparisons with previous year.

## EXPORT HIGHLIGHTS

### Fiscal Year

July-August 1959 agricultural exports are estimated 4 percent ahead of 1958. Exports for July and August, the first 2 months of fiscal year 1960, are estimated at \$630 million compared with \$608 million in 1959. This year's estimate is based on actual shipments valued at \$327 million for July and estimated shipments totaling \$303 million for August. More wheat, feed grains, rice, edible vegetable oils, soybeans, vegetables, and animal products were shipped; less cotton and tobacco. Fruit exports totaled the same in both periods.

Exports excluding cotton were 17 percent ahead. July-August cotton exports are estimated at \$25 million this year, three-fourths below the value last year. Exports of the other agricultural commodities totaled \$605 million, 17 percent more than last year's value for July and August.

### U. S. agricultural exports July-August 1958 and 1959

Other <sup>2/</sup>	13	15	+15
TOTAL	608	630	+4

<sup>1/</sup> Partly estimated. <sup>2/</sup> Excludes private relief. <sup>3/</sup> Mostly CCC donations to welfare agencies.

### Marketing Year

**COTTON** Increase is in prospect for cotton exports in 1959-60 season. Cotton exports in August 1959 were only about half as much as the 209 thousand running bales in August 1958, according to a trade source. The smaller volume of exports since August 1, as well as in the latter part of the 1958-59 season, resulted in part from the reduction of the price structure for the 1959-60 season by about \$15 per bale from 1958-59. August 1 marked the takeover by CCC of about 6 million bales of 1958-crop cotton and was the effective date of the increased payment-in-kind export rate. Before that date, shippers'

stocks had been severely reduced, and cotton available for export on August 1 was in short supply. However, sales for export in subsequent months had continued in fairly large volume. Registrations of sales for export under the 1959-60 payment-in-kind program totaled almost 2 million bales through September 18. Cotton is expected to move into export in substantially larger volume after September. Total exports for the 1959-60 season are likely to be at least 5.5 million bales.

**GRAINS** July-August wheat shipments were slightly ahead this year.

Exports of wheat and wheat flour in grain equivalent, excluding USDA private welfare donations, are estimated at 70 million bushels in July and August 1959 compared with 63 million in 1958. The current export season, however, looks a little less promising than 1958-59, when exports amounted to 443 million bushels, including 20 million in donations. Preliminary indications are that, with Europe's and India's larger crops this year, U. S. exports in 1958-59 may total about 410 million bushels.

Feed grain exports continued to expand in July and August. Feed grain exports in July and August totaled 2.4 million short tons in 1959 as against 2 million in 1958. The strong demand continued in Europe, with U. S. exports aided by plentiful supplies and competitive pricing under the payment-in-kind program.

**TOBACCO** July-August tobacco exports totaled less this year than last.

July-August exports of tobacco were 65 million pounds in 1959, 10 million less than in 1958. Exports will increase seasonally during the months ahead as large volume shipments are made from the new crop of flue-cured, the major export tobacco. Prospects are for tobacco exports this fiscal year to be only a little less than the 473 million pounds exported in the past year.

**VEGETABLE OILS AND OILSEEDS** Soybean exports in 1958-59 are estimated 28 percent ahead of those in 1957-58. October-August exports of soybeans were 105 million bushels in the 1958-59 season compared with 84 million in 1957-58. The full season's total is expected to be 110 million bushels, 24 million more than last year. The 1959-60 outlook is for another banner year, with exports rising to a new high. Western Europe and Japan will continue to need to import large quantities of beans as they probably will not be able to obtain increased supplies from non-U. S. sources.

Edible vegetable oil exports are well ahead of last year. October-August combined shipments of cottonseed oil and soybean oil are estimated at 1,175 million pounds in the 1958-59 season compared with 944 million in 1957-58. The full season's total is likely to reach 1.3 billion pounds, 300 million more than in 1957-58. Prospects are for another heavy outward movement in 1959-60, including substantial amounts sold for dollars as well as for local currencies.

**FRUITS** Raisin crop was too small to sustain high-level exports. Exports of raisins are estimated at 46 million pounds in the season that ended August 31, 1959, 10 million less than the unusually low level in the previous season and 55 million under the relatively high quantity in the

# TRADE NEWS ROUNDUP

September 25

1959

Major provisions of the Public Law 480 Extension Law affecting the program to sell farm surpluses for foreign currencies:

- ...Title I is extended for 2 years through December 31, 1961 and the authorization of \$6.25 billion is increased by \$1.5 billion a year (CCC cost).
- ...The law (1) provides that not less than the equivalent of 5 percent of total future sales under Title I shall be made available, from sales proceeds and loan repayments, to the extent specified in appropriation acts for agricultural market development purposes; (2) provides that particular regard shall be given to provide for convertibility needed for market development in dollar markets; and (3) authorizes Title I sales programs with countries which are dollar markets, in amounts necessary to provide funds for market development purposes, if sufficient foreign currencies are otherwise not available.

— 0 —

Foreign actions facilitating U. S. exports: ...Changes in Australia's import licensing August 1 should aid U. S. exports of cotton, hog casings, linseed oilcake and meal, malt, vegetable oils, and field and garden seeds. ...Britain on August 13 freed dollar-area imports of butter from licensing controls. Dollar eggs, cheese, and cream were freed in June. ...West Germany is licensing imports of canned apricots, peaches, pears, fruit salad, and fruit cocktail in containers of less than 11 pounds until December 30, or until an unannounced value limit is reached. ...Smaller production of vegetables for processing has prompted West Germany to issue two import tenders for canned vegetables. No value limit has been announced. ...Uruguay has announced a \$150,000 quota to import dried fruits for remanufacture until December 15.

— 0 —

USDA, together with other U. S. agencies, will demonstrate the newest techniques of agricultural research, production, and marketing at the First World Agriculture Fair, at New Delhi, India, December 11 through February 14. This has been heralded as the largest and most complete agricultural exhibit ever attempted.

— 0 —

Japan expects to buy over four-fifths of its 18.3 million bushels of foreign soybeans from the United States during the first half of its 1959-60 fiscal year which began in April. In 1958-59, Japan imported at the 6-month rate of 16.6 million bushels, of which over four-fifths came from the United States.

— 0 —

Following a U. S. tour by a 3-man buying team under an FAS livestock market development project, Chileans have bought about \$75 thousand worth of hogs, sheep, goats, cattle, horses, and turkeys.

1956-57 season. While the U. S. crop increased from 326 million pounds in 1957 to 344 million in 1958, it was still far short of the 400 million in 1956 and not sufficient to sustain exports at the usual level.

Smaller U. S. crop also limited prune exports in 1958-59. Exports of dried prunes are estimated at 55 million pounds for the season that ended August 31, 1959, 55 percent less than the 123 million in the previous season. The 1958 U. S. prune crop of 194 million pounds was 42 percent under the one in 1957.

**PULSES** Dried bean exports set new record in 1958-59 season. Exports of dried beans are estimated at a new record high of 400 million pounds in the 1958-59 season that ended on August 31. This compares with 196 million pounds in the previous season. Large shipments to Europe were made possible by the substantially bigger 1958 U. S. crop and by the lack of competition from other exporting areas, notably the Danubian basin, where drought reduced the 1958 crop. Drought and excessive rain caused Mexico and Cuba to import nearly 100 million pounds each this past year. Domestic production was 1.9 billion pounds in 1958 compared with 1.6 billion in 1957 (cleaned basis).

Exports of dried peas were heavy despite smaller U. S. crop. The 1958-59 export season for dried peas closed on July 31 with a total outward movement of 145 million pounds, 38 million more than in the previous season. The active export demand was due to smaller supplies abroad, particularly in Europe. Exports increased despite the relatively small U. S. crop--248 million pounds in 1958 compared with 333 million in 1957. Large beginning stocks and European willingness to pay higher prices made the excellent export season possible.

**POULTRY** January-July exports of poultry meat were at record high. U. S. exports of fresh and fresh frozen chickens during the first 7 months of 1959 totaled 48 million pounds, 235 percent over the like period of 1958. Broiler and fryer exports were 37 million pounds, 4 times as much as in 1958. Exports to Switzerland continued to gain, but West Germany was the leading market.

#### I M P O R T     H I G H L I G H T S

July agricultural imports were about the same this year as last. U. S. imports of agricultural commodities totaled \$317 million in July 1959 compared with \$313 million in July 1958. Complementary commodities (items unlike those produced in commercial volume in the United States) amounted to \$136 million in July 1959, a decline of \$2 million from July 1958. Declines in coffee and cocoa beans were offset by increases in crude rubber and carpet wool. July 1959 supplementary imports (somewhat competitive items similar to those of U. S. agriculture) totaled \$181 million, \$6 million over the \$175 million in July 1958. There were gains in cane sugar, vegetable oils, copra, beef, and hides and skins and declines in live cattle, pork, and tobacco.

# FOREIGN AGRICULTURAL TRADE

OF THE UNITED STATES

# Digest

OCTOBER 1959

Issued monthly by Foreign Agricultural Service, United States Department of Agriculture, Washington 25, D. C. Free within U. S. on request. Also available is the monthly Foreign Agricultural Trade Statistical Report, listing monthly and annual statistics on quantity and value of U. S. agricultural exports and imports, destinations, comparisons with previous year.

## EXPORT HIGHLIGHTS

July-September agricultural exports in 1959 were 9 percent ahead of 1958. Exports in the July-September quarter of the 1959-60 fiscal year totaled \$986 million compared with 1958-59's \$906 million. Largest dollar gains were in feed grains, tobacco, soybeans, edible vegetable oils, and animal products; but increases occurred also in wheat, flaxseed, and fruits and vegetables. The principal decline was in cotton, but less rice was exported also.

September agricultural exports in 1959 were 21 percent ahead of 1958. The September 1959 export value was \$361 million; the September export value

1/ Excludes private relief.

2/ Mostly CCC donations to private welfare agencies for overseas use.

last year totaled \$298 million. Exports of cotton continued reduced while wheat stayed close to last year's levels. The improved showing this September was the result of expanded exports of tobacco, feed grains, soybeans, and edible vegetable oils. There was some increase also in livestock products, particularly animal fats, meats, hides and skins, and dairy products.

Prospects are favorable for a very good export year in 1959-60. U. S. exports of agricultural commodities in the fiscal year ending June 30, 1960 are expected to reach or exceed \$4 billion--up at least 8 percent from 1958-59's \$3.7 billion. If \$4 billion is reached, exports would be tied with 1957-58 as the third highest in history, exceeded only by the \$4.7 billion record in 1956-57 and the \$4.1 billion peak in 1951-52. Export quantity may be the second highest on record. The improvement is expected to result from larger

shipments of cotton, feed grains, rice, vegetable oils, soybeans, fruits, and vegetables while exports of wheat, tobacco, and dairy products are likely to decline.

**COTTON** July-September cotton exports were well below those of a year earlier. With cotton exports at 230 thousand running bales in September 1959, July-September shipments approximated 458 thousand bales in 1959, 51 percent of the 890 thousand in 1958. September exports were 2-1/3 times August exports. Registration of sales for export under the 1959-60 payment-in-kind program totaled 2.8 million bales through October 23. A reduction in the domestic price and an increase in the export payment rate this season make the export price of U. S. cotton fully competitive with prices of other growths. Prices on world import markets are stable and closely competitive at levels lower than last season's. Cotton stocks are lower in importing and exporting countries, consumption abroad is increasing, and foreign cotton production is expected to decline this year for the first time since World War II. Because of these favorable factors, exports will likely reach 5-1/2 million running bales this fiscal year compared with 3.1 million last fiscal year.

**GRAINS** Early-season wheat shipments were slightly ahead this year. Exports of wheat and wheat flour in grain equivalent, excluding USDA private welfare donations, were 99 million bushels in July-September 1959, 5 million more than a year earlier. Title I Public Law 480 shipments are continuing to bolster exports, but they are encountering a smaller world import demand and increased competition from other exporters. It is estimated that exports will approximate 410 million bushels in 1959-60 compared with 443 million in 1958-59.

Rice exports ran slightly ahead in quantity, less in value. July-September shipments of milled rice totaled 436 million pounds in 1959 compared with 426 million in 1958. Value declined by 12 percent. Export prices are lower this year as the export payment has been raised to stimulate exports. Demand in Europe is stronger this year. A total of 19.5 million bags (milled basis) is in prospect this fiscal year compared with 14.2 million in 1958-59 and 12 million in 1957-58.

Feed grain exports continued at exceptionally high rate. Feed grain shipments in July-September 1959 totaled 3.5 million short tons compared with 2.9 million in July-September 1958. Europe's needs are continuing high as the result of lower forage production resulting from drought, and U. S. exports are being fostered by plentiful supplies from record production. This year's exports are likely to exceed last year's 12 million tons.

**TOBACCO** Tobacco exports made 16-percent gain in July-September quarter. July-September exports of unmanufactured tobacco were 156 million pounds in 1959 compared with 134 million in 1958. September exports this year at 94 million pounds were 59 percent ahead of 1958, reflecting stepped-up shipments in anticipation of the October dock strike. Prospects are for all tobacco exports this fiscal year to be several million pounds less than the 473 million pounds last year. While exports are generally favored by the economic situation abroad, increased foreign competition

# TRADE NEWS ROUNDUP

November 5

1959

USDA is continuing to explore the drought situation in Europe and to analyze the probable effects on demand for U. S. farm products. Persistent drought throughout the summer and early fall burned pastures and sharply reduced root and forage crops. Although grains generally escaped damage, and dry weather facilitated this year's harvest, fall planting has been delayed. This may have serious effects on next year's bread grain harvest. The drought has made it necessary to move up winter feeding schedules. The urgent need to build up feed supplies is expected to result in marked increases in European imports of feed grains and protein feeds. Efforts are being made also to import hay.

---

FAS has received many inquiries from Europe concerning availability of U. S. white beans. Eastern Europe's bean crop is said to be only fair-to-good and not large enough to share with Western Europe.

---

Colombia has (1) signed a Title I Public Law 480 agreement for \$32 million, including wheat, wheat products, soybean or cottonseed oil, and tobacco; (2) decided to allow imports of breeding heifers and cows.

---

Other foreign actions facilitating U. S. exports: . . . The United Kingdom on November 3 liberalized dollar imports of fresh lemons, oranges, and tangerines; fruit juices (except grape and orange); dried fruits; and meat (other than pork). . . . France on September 26 liberalized dollar imports of tallow, specified lemon and other citrus juices (except orange), dried apricots, dried prunes, and (from January 1, 1960) variety meats. . . . As a result of this summer's drought, West Germany has suspended the 18-percent duty on potato imports October 15-March 15.

---

Because of reduced cottonseed supply, Mexico may need to import sizable quantities of edible oils in the spring and summer of 1960. To maintain consumption will require imports of 50,000 tons.

---

A 1-year International Coffee Agreement, signed September 24, replaced and broadened the previous Latin American Agreement. The new agreement, including African, French, Latin American, and Portuguese producers, has the short-term objectives of price stabilization and orderly marketing. It is a fixed export quota arrangement; the previous one provided that signatories hold back specified percentages of their exportable crop.

---

The U. S. Tariff Commission will hold a public hearing in Washington November 23 on Section 22 import controls for certain cheeses.

from expanded foreign production and maintenance of trade barriers in many importing countries are hampering U. S. leaf in maintaining its share in the world market. Moreover, foreign buyers are concerned over increases in the prices paid in U. S. auction markets.

VEGETABLE OILS      Soybean exports ran well ahead of last year. July-  
AND OILSEEDS      September shipments of soybeans were 22 million bushels  
                         in 1959 compared with 15 million in 1958. The excep-  
tionally strong foreign demand is continuing, with another record in  
sight for 1959-60--about 120 million bushels compared with 103 million  
last year. Large quantities are again expected to go to Western Europe,  
Japan, and Canada.

Exports of vegetable oils advanced 93 percent in quantity. July-September shipments of cottonseed oil and soybean oil totaled 528 million pounds in 1959 compared with 273 million in 1958. The need for imports in Europe has risen substantially as the result of shorter world copra supplies and reduced oil stocks on the Continent. Combined exports of the two oils in fiscal year 1959-60 are likely to be somewhat larger than the 1.1 billion pounds exported in 1958-59.

FRUITS AND      More fruits and vegetables moved into export. July-September  
VEGETABLES      shipments of fruits, vegetables, and preparations amounted  
                         to \$101 million in 1959 compared with \$91 million in 1958.  
Principal gains were in fresh oranges, canned fruits, and dry edible beans.

ANIMAL PRODUCTS      Exports of animal products gained. The quarter's total  
                         of \$140 million this year compared with \$105 million in  
1958. All major items registered increases, including animal fats, meats,  
hides and skins, and dairy products.

#### I M P O R T      H I G H L I G H T S

August agricultural imports increased 24 percent in 1959 over 1958. U. S. imports of agricultural commodities totaled \$352 million in August 1959 compared with \$285 million in August 1958. Complementary commodities (items unlike those produced in commercial volume in the United States) at \$173 million were ahead by \$52 million. Coffee and crude natural rubber accounted for four-fifths of the increase. Lower world coffee prices have been encouraging imports; value of imports this August was 37 percent higher than last August while quantity mounted 73 percent. Supplementary agricultural imports (competitive items somewhat similar to those produced in the United States) totaled \$179 million this August, \$15 million above a year earlier. Largest gains were in beef and veal, cane sugar, apparel wool, and vegetable oils; declines occurred in live cattle, pork, and feeds and fodders.

July-August imports were up 12 percent over last year. Agricultural im-ports for July-August totaled \$669 million in 1959 compared with \$598 million in 1958. Of the increase of \$71 million, supplementary items accounted for 31 percent, reflecting increases in cane sugar, beef and veal, hides and skins, copra, and apparel wool that were partly offset by decreases in live cattle, cotton, pork, and feeds and fodders. In this period, complementary imports increased by \$49 million, reflecting gains principally in crude natural rubber and carpet wool.

# FOREIGN AGRICULTURAL TRADE

OF THE UNITED STATES

U. S. DEPARTMENT OF AGRICULTURE

DEC 16 1959

# Digest

NOVEMBER —

DECEMBER 1959

Issued monthly by Foreign Agricultural Service, United States Department of Agriculture, Washington 25, D. C. Free within U. S. on request. Also available is the monthly Foreign Agricultural Trade Statistical Report, listing monthly and annual statistics on quantity and value of U. S. agricultural exports and imports, destinations, comparisons with previous year.

## EXPORT HIGHLIGHTS

July-October agricultural exports in 1959 were 7 percent ahead of 1958. Exports in the first 4 months this fiscal year totaled \$1,346 million, 7 percent more than last year's comparable \$1,263 million. Largest changes were increases of 43 percent in vegetable oils and oilseeds and 32 percent in animal products and the decrease of 33 percent in cotton. (Cotton exports in October this year were more than double the volume of a year ago. See page 2.) Feed grain exports were up 12 percent in value. Rice shipments, up

TOTAL	1,263	1,346	+ 7

considerably in volume, were down 2 percent in value due to lower export prices. Exports of commodities other than cotton increased 12 percent.

October shipments were slightly above those of a year earlier.

October exports were \$360 million this year compared with \$357 million in 1958. This October's value, nearly equal to September's \$361 million, was well above the July-September average of \$329 million. Substantially more cotton, rice, cottonseed oil, animal fats, and dairy products were exported this year than last, but sizable reductions occurred in wheat, tobacco, and soybean oil. Exports of feed grains and soybeans were about the same in both years.

The United Kingdom was the main gainer in export markets. July-September U. S. exports of farm products to all countries this fiscal year were \$81 million ahead

1/ Partly revised. 2/ Excludes private relief. 3/ Excludes products. 4/ Cottonseed and soybean. 5/ Mostly CCC donations.

of 1959. (See table below.) Exports to the United Kingdom showed the largest rise: \$33 million; and those to the Netherlands showed the second largest gain: \$26 million. Other countries to which exports showed large increases were Canada, West Germany, Egypt, Turkey, and Denmark. Shipments to Japan ran \$17 million behind a year earlier. Declines also took place in exports to India, Cuba, Spain, Yugoslavia, Mexico, and Korea.

**COTTON** Cotton exports were up substantially in October. October cotton exports, excluding linters, amounted to 392 thousand running bales this year, 211 thousand more than in 1958. The July-September movement was relatively slow because 1958-crop cotton in CCC was in loan status prior to August 1, and there was some delay in movement of "Choice A" 1959-crop cotton into marketing channels. However, late reports indicate heavy export bookings well into calendar year 1960, and registrations for export under the payment-in-kind program totaled 3.6 million bales through November 20. Exports for the 1959-60 season are now estimated at around 5.5 million bales; U. S. cotton prices are more competitive at lower levels, foreign consumption is increasing, and production and stocks abroad are smaller than last year.

**GRAINS** Wheat export rate slowed in October. Wheat exports in October 1959, including grain equivalent of flour but excluding donations, were 29 million bushels compared with 36 million a year earlier. The July-October total was 129 million bushels this year compared with 130 million in 1958. Foreign demand as a whole is little changed this year from last, and a large volume of U. S. wheat is continuing to move under Title I of Public Law 480.

TOTAL	905.5	986.7	+ 9

Feed grain exports, down from September, were still ahead for July-October. Feed grain exports, which have been around 1 million short tons a month for some time, dipped to 861 thousand tons in October, reflecting the dock strike. October's total this year was about the same as a year ago. Due to heavy movement earlier this year, July-October shipments at 4,373 thousand tons were ahead of last year by 621 thousand. Much of the improvement stemmed from expanding livestock and poultry production abroad, but the drought in Europe also raised needs.

**TOBACCO** July-October tobacco exports were down from a year ago. Following upon the 94 million pounds shipped in September, tobacco exports in October were 50 million pounds,

# TRADE NEWS ROUNDUP

November 30

1959

Removal of foreign trade restrictions against imports from the United States, including farm products, is today a major Government policy issue. Appeals are being made and arguments advanced at highest levels in the Nation's foreign relationships in the cause of trade liberalization. With the remarkably successful financial recovery of many foreign countries, the postwar dollar problem has practically disappeared. The International Monetary Fund has reported that discrimination on balance-of-payments grounds generally is no longer justifiable.

New market opportunities for U. S. agriculture as the result of trade liberalization have been reported in TNR. Some are the outgrowth of the U. S. drive at the recent 15th Session of the GATT to end discrimination against U. S. products. Latest step is the British liberalization of dollar imports of canned and cooked frozen poultry.

---

The U. S. exhibit at the first World Agriculture Fair (New Delhi, India, December 11-February 14), to be officially opened by President Eisenhower, will mirror the dynamic efficiency of U. S. agriculture. Displays will portray the rapid progress and unsurpassed productivity achieved under a free enterprise system by featuring the roles of research, technology, and education in production and by demonstrating farm-to-consumer merchandising (including grading, processing, packaging, transportation, wholesaling, and retailing).

---

The success of FAS-industry efforts to demonstrate to South Americans the values of soybean oil as food is paying dividends. Peru and Chile have bought 15 thousand tons of U. S. soybean oil for dollars as the result of market development projects. An oil-processing technician dispatched by the Soybean Council of America provided technological information needed to process soybean oil for food use. Both countries have long used cottonseed, sunflower, and rapeseed oil for food.

---

The first Title I Public Law 480 agreement was signed with the United Arab Republic (Syria Region) November 16 for wheat and barley totaling \$9.6 million. A supplemental agreement with India for \$18.5 million of rice was announced November 23.

---

Britain's prolonged drought of last summer has created a strong demand for oilcake and meal. With grass and hay crops below normal, feeding in some areas started 2 months earlier than usual. Oilcake and meal imports during the first 8 months of 1959 were one-third above a year earlier. Soybean meal imports alone in the first 8 months of this year have already exceeded the total for 1958.

34 million under a year earlier. July-October shipments totaled 206 million pounds, 11 million less than last year. Higher U. S. prices relative to foreign prices have encouraged increased purchases from competitors, mainly Rhodesia-Nyasaland, which this year had a record crop.

**FATS AND OILS** July-October soybean exports were higher this year. Soybean exports in October 1959 were equal to the 12 million bushels shipped a year ago. July-October shipments totaling 34 million bushels were 7 million above a year earlier. Foreign supplies have continued limited and foreign demand has remained strong.

Limited foreign supplies and large shipments under Public Law 480 favored U. S. vegetable oil exports. Combined shipments of cottonseed and soybean oils in October were 96 million pounds, 16 million more than a year earlier but well below the July-September 1959 average of 176 million. July-October exports were 624 million pounds this year compared with 354 million last year. There was a heavy movement under Public Law 480 in this period. Exports for dollars rose sharply, probably because of a need to replenish stocks and limited supplies from other sources. Copra and coconut oil supplies generally have been relatively tight for some time. Argentina has been in a deficit edible oil position. Canada has a substantially reduced rapeseed crop.

Lard and tallow exports expanded. July-October lard exports rose from 126 million pounds in 1958 to 223 million in 1959; and edible and inedible tallow, from 344 million pounds to 484 million. The sharp increase in U. S. hog slaughter the past year and lower prices have strongly stimulated lard exports. While the cattle slaughter rate has remained relatively low, increased marketings of fatter animals have resulted in more tallow output available for export at competitive prices.

**FRUITS AND VEGETABLES** Orange exports were aided by trade liberalization. July-October exports of fresh oranges totaled 167 million pounds in 1959 compared with 98 million in 1958. Exports for the season ending in October were 568 million pounds compared with the prior season's 406 million. Exports were helped by the larger domestic supply this past season, but of greater importance were the French liberalization of summer oranges and British liberalization of all fresh oranges.

Price-supply relationships stimulated 1958-59 potato exports. Exports of white potatoes were 311 million pounds for the season ending September 30, 1959 against 248 million the previous season. Larger U. S. supplies and lower prices encouraged sales in Canada, where supplies were smaller and prices higher than in the prior season.

**DAIRY PRODUCTS** Europe's drought spurred demand for nonfat dry milk. July-October shipments of dairy products rose from \$29 million in 1958 to \$43 million in 1959. Shipments of nonfat dry milk expanded from 64 million to 124 million pounds, excluding donations. The summer's drought in Europe hurt milk output there.

### IMPORT HIGHLIGHTS

July-September agricultural imports were 21 percent larger this year. Imports in July-September were \$1,087 million in this fiscal year, \$187 million above those a year earlier. Complementary imports gained by \$139 million, or 35 percent, while supplementary imports moved up by \$48 million, or 10 percent.

Coffee, rubber, and carpet wool led in complementary gain. July-September complementary imports (items unlike those produced by U. S. agriculture) increased from \$397 million in 1958 to \$536 million in 1959. Two-thirds of the rise occurred in September alone, principally reflecting a doubling of coffee imports. More than 80 percent of the quarter's gain was accounted for by coffee, rubber, and carpet wool.

Beef predominated in supplementary gain. July-September supplementary (competitive) imports advanced from \$503 million in 1958 to \$551 million in 1959. Over half of the increase occurred in September, reflecting largely advances in beef and veal, hides and skins, and cane sugar that were partly offset by reductions in dutiable cattle.
